Membrane Characterization José Ignacio Calvo Díez, Antonio Hernández Giménez, 2024-10-21 Membrane technology has become an essential tool in many industrial processes in which the separation or fractionation of various species is necessary to obtain or recover high value added products In these processes the synthetic membranes usually play a filter role being characterized by the size of the pores present in it which delimit the size of the molecules to be separated It is therefore necessary to have a precise knowledge of the characteristic size of said pores In this book the main techniques that can be used to determine the mean pore size and the pore size distribution of a synthetic membrane are analyzed and discussed from the point of view of their theoretical basis with special attention to equipment that should be used for each technique as well as reviewing their advantages and disadvantages Through this text the researcher or responsible of the quality control at membrane manufacturing companies will be able to know decide properly which of the porosimetric techniques is more adequate for the knowledge that needs to be obtained from their filters

Surface Chemistry and Electrochemistry of Membranes Torben Smith Sorenson, 1999-02-16 An eclectic mix of studies on chemical and electrochemical behaviour of membrane surfaces The book looks at membranes both organic and inorganic from a host of different perspectives and in the context of many diverse disciplines It explores the behaviours of both synthetic and biological membranes employing physical chemical and physiochem

Therapeutic RNA Nanotechnology Kirill A. Afonin, Morgan Chandler, 2021-07-21 This collection of research articles and reviews covers the latest work in the design delivery dynamic abilities and immune stimulation of RNA nanoparticles which have driven the utilization of their immunomodulatory properties The unknown immune properties of nucleic acid nanoparticles have been a major hurdle in their adaptation until the works herein began assessing their structure activity relationships This collection chronologically follows the path of investigating the recognition of design components to implementing them into nucleic acid nanostructures RNA nanotechnology is an emerging platform for therapeutics with increasing clinical relevance as this approach becomes more widely used and approved for the treatment of various diseases The latest research aims to take advantage of RNA s modular nature for the design of nanostructures which can interact with their environments to communicate programmed messages with intracellular pathways In doing so nanoparticles can be used to elicit or elude responses by the immune system as desired in conjunction with their therapeutic applications
