

Numerical Methods for Chemical Engineering

Suitable for a first-year graduate course, this textbook unites the applications of numerical mathematics and scientific computing to the practice of chemical engineering. Written in a pedagogic style, the book describes basic linear and nonlinear algebraic systems all the way through to stochastic methods, Bayesian statistics, and parameter estimation. These subjects are developed at a nominal level of theoretical mathematics suitable for graduate engineers. The implementation of numerical methods in MATLAB[®] is integrated within each chapter and numerous examples in chemical engineering are provided, together with a library of corresponding MATLAB programs. Although the applications focus on chemical engineering, the treatment of the topics should also be of interest to non-chemical engineers and other applied scientists that work with scientific computing. This book will provide the graduate student with the essential tools required by industry and research alike.

Supplementary material includes solutions to homework problems set in the text, MATLAB programs and tutorial, lecture slides, and complicated derivations for the more advanced reader. These are available online at www.cambridge.org/9780521859714.

KENNETH J BEERS has been Assistant Professor at MIT since 2000. He has taught extensively across the engineering discipline at both the undergraduate and graduate level. This book is a result of the successful course the author devised at MIT for numerical methods applied to chemical engineering.

NUMERICAL, SYMBOLIC AND STATISTICAL COMPUTING FOR CHEMICAL ENGINEERS USING MATLAB Ghosh, Pallab, 2018-09-01. Numerical analytical and statistical computations are routine affairs for chemical engineers. They usually prefer a single software to solve their computational problems and at present MATLAB has emerged as a powerful computational language which is preferably used for this purpose due to its built-in functions and toolboxes. Considering the needs and convenience of the students the author has made an attempt to write this book which explains the various concepts of MATLAB in a systematic way and makes its readers proficient in using MATLAB for computing. It mainly focuses on the applications of MATLAB rather than its use in programming basic numerical algorithms. Commencing with the introduction to MATLAB the text covers vector and matrix computations, solution of linear and non-linear equations, differentiation and integration and solution of ordinary and partial differential equations. Next analytical computations using the Symbolic Math Toolbox and statistical computations using the Statistics and Machine Learning Toolbox are explained. Finally the book describes various curve fitting techniques using the Curve Fitting Toolbox. Inclusion of all these advanced level topics in the book stands it out from the rest. **KEY FEATURES** Numerous worked-out examples to enable the readers understand the steps involved in solving the chemical engineering problems. MATLAB codes to explain the computational techniques. Several snapshots to help the readers understand the step-by-step procedures of using the toolboxes. Chapter-end exercises including short answer questions and numerical problems. Appendix comprising the definitions of some important and special matrices. Supplemented with Solutions Manual containing complete detailed solutions to the unsolved analytical problems. Accessibility of selected colour figures including screenshots and results outputs of the programs cited in the text at www.phindia.com.
