Selecting a Flash Memory Solution for Embedded Applications

When looking for flash memory for your embedded applications, Micron has the right solution: Our many years of embedded industry experience and our broad portfolio of NOR and NAND flash memory products — from serial and parallel NOR flash, to raw and managed NAND flash, to solid state drives (SSDs) — provide you with ideal code and data storage solutions. Selecting the right solution requires an understanding of each technology, including attributes related to I/O performance, pin count, data integrity, and manufacturing longevity requirements. This guide describes the various flash technologies and provides a systematic way for an embedded system designer to select the optimal nonvolatile memory solution based on key design considerations. The application requirements will ultimately dictate the right solution.

Getting to Know NOR Flash

NOR flash devices, available in densities up to 2Gb, are primarily used for reliable code storage (boot, application, OS, and execute-in-place [XIP] code in an embedded system) and frequently changing small data storage. NOR flash provides systems with the fastest bootable memory solution, is easy to implement, and requires minimal ongoing management due to the underlying cell structure. Because of the cell structure, NOR flash is inherently more reliable than other solutions.

There are two general categories of NOR flash—serial and parallel—that differ primarily with respect to their memory interfaces. Serial NOR flash, with its high-speed continuous read capabilities throughout the entire memory array and its small erase block sizes, is tailored for applications that shadow program code and/or store granular data. Serial NOR's low pin counts and small package solutions make it a good fit for applications like PCs, ultrathins, servers, set-top boxes (STBs), printers, Blu-ray drives/players, modems/routers, wearables, and hard disk drives (HDDs). Parallel NOR flash delivers fast system boot times, making it ideal for applications like digital still cameras (DSC) and DSLR) that need performance, as well as other process-intensive applications like networking routers/switches, home gateways, and STBs.

Micron has created a new category of NOR flash, called **Xccela™** flash memory, which leverages the best of serial NOR flash and parallel NOR flash so that system designers do not have to choose between high performance and low pin counts.
