Davis, 2017-12-06 Measurement and Data Analysis for Engineering and Science Fourth Edition provides up to date coverage of experimentation methods in science and engineering This edition adds five new concept chapters to introduce major areas of experimentation generally before the topics are treated in detail to make the text more accessible for undergraduate students These feature Measurement System Components Assessing Measurement System Performance Setting Signal Sampling Conditions Analyzing Experimental Results and Reporting Experimental Results More practical examples case studies and a variety of homework problems have been added and MATLAB and Simulink resources have been updated

Applied Numerical Methods Using MATLAB Won Y. Yang, 2005-05-02 In recent years with the introduction of new media products there has been a shift in the use of programming languages from FORTRAN or C to MATLAB for implementing numerical methods This book makes use of the powerful MATLAB software to avoid complex derivations and to teach the fundamental concepts using the software to solve practical problems Over the years many textbooks have been written on the subject of numerical methods Based on their course experience the authors use a more practical approach and link every method to real engineering and or science problems The main benefit is that engineers don't have to know the mathematical theory in order to apply the numerical methods for solving their real life problems An Instructor's Manual presenting detailed solutions to all the problems in the book is available online
