

NVIDIA GRID™ K1 AND K2 GRAPHICS-ACCELERATED VIRTUAL DESKTOPS AND APPLICATIONS

NVIDIA GRID™ technology offers the ability to offload graphics processing from the CPU to the GPU in virtualized environments. This gives the data center manager the freedom to deliver true PC graphics-rich experiences to more virtual users for the first time.

The NVIDIA GRID K1 and K2 family provides:

CPU Virtualization*

GRID K1 and K2 feature the NVIDIA® Kepler™ architecture that, for the first time, allows complete virtualization of the GPU. This means multiple users can share a single GPU, improving user density while preserving true PC performance and compatibility.

Low-Latency Remote Display

NVIDIA's patented low-latency remote display technology greatly enhances the user experience by reducing the lag that users feel when interacting with their virtual machines. With this technology, the virtual desktop screen is pushed directly to the rendering process.

H.264 Encoding†

The Kepler GPU includes a high-performance H.264 engine capable of encoding simultaneous streams with superior quality. This provides a great first forward-in-cloud server efficiency by offloading the CPU from encoding streams and allowing these functions to be shared by the number of GPUs in a server.

Power Efficiency

GRID GPUs are designed to provide data center-class power efficiency, including the revolutionary new streaming multiprocessor, called "SMX". The result is an innovative power solution that delivers outstanding performance per watt for the enterprise data center.

Maximum User Density

NVIDIA GRID K1 and K2 feature an optimized multi-GPU design that helps to maximize user density. GRID

K1 boards, which include four Kepler-based GPUs, can fit 20 or more users and designed to host the maximum number of concurrent users. GRID K2 boards, which include two Kepler and two Titan GPUs, can fit 10 or more, deliver maximum density for users of graphics-intensive applications.

24/7 Reliability

GRID boards are designed, built, and tested by NVIDIA for 24/7 operation. Working closely with leading server vendors such as Cisco, Dell, HP, IBM, and SuperMicro ensures that GRID cards perform optimally and reliably for the life of the system.

Widest Range of Virtualization Solutions

GRID boards enable GPU-accelerated virtualization solutions from Citrix, Microsoft, and VMware, delivering the flexibility to choose from a wide range of proven solutions.

IT managers can now:

Leverage industry-leading virtualization solutions, including Citrix, Microsoft, and VMware

Add the most graphics-intensive users to virtual solutions

Improve the productivity of all users

Users can now:

Experience responsive desktops and rich multimedia experiences

Access all virtual applications, including the most 3D-intensive

Access their most important apps from anywhere, on any device

* Available for Citrix XenServer 5.5. Some user licenses provided to use GRID are required.
