Exercise 1

Consider the following database:

Building (Building-nb, Building-name, #Street-nb)
Street (Street-nb, Street-name, #City-nb)
City (City-nb, City-name)

N.B: - No repeated values for the City-name field.
 - A street of one city can have the name of another city; for example, in the city « Tripoli » we can have a street named « Beirut ».

Formulate the following queries in SQL:

- a) Display the city names that don't have any street with the name « Independence »

```
Select City-name
From City
Where City-nb NOT IN (Select City-nb
                      From Street
                      Where Street-name = 'Independence');
```

- b) Display the street names that are used at least in two cities.

```
Select Street-name
From Street
Group by Street-name
Having count (distinct City-nb) >= 2 ;
```

Another solution:

```
Select S1. Street-name
From Street S1, Street S2
Where S1.Street-name = S2.Street-name
And S1.City-nb <> S2.City-nb;
```

- c) For each street has a name of a city, display the street name and the name of the city that the street exists in.

```
Select Street-name, City-name
From Street S, City C
Where S.City-nb = C.City-nb
And Street-name IN (Select City-name
                   From City) ;
```
