

## Using Stats for Categorical Data Analysis

**NOTE:** These problems make extensive use of Nick Cur's `stats_data`, which is actually a collection of datasets, and Jeffrey Meeker's `spc` command. From within Stata, use the commands `use stats_data`, `use stats` and `use spc` (with `use` left to get the most current version of these programs). Thanks to Nick Cur, Richard Campbell and Philip Fisher for helping me to identify the Stata modules needed for this module.

This module shows how to work the problems in Stata, use the relevant commands for the underlying statistical theory and the `SPC` command. Most of the commands have alternative options/parameters that may be needed; type `help commandname` for more information.

### CASE 1: COMPARING SAMPLE AND POPULATION DISTRIBUTIONS

Suppose that a study of educational achievement of Americans over time being carried out. The population consists of the set of all Americans under age 25 years old at the time of the study. Each subject observed can be put into 1 out of 6 of the following categories, based on his/her highest formal educational achievement:

- 1 = college grad
- 2 = some college
- 3 = high school grad
- 4 = some high school
- 5 = finished 1st grade
- 6 = did not finish 1st grade

Note that these categories are mutually exclusive and exhaustive.

The researcher suggests to you that 10 years ago the distribution of educational achievement on this scale for 25 year old men was:

- 1 = 10%
- 2 = 27%
- 3 = 31%
- 4 = 27%
- 5 = 2%
- 6 = 2%

A random sample of 200 subjects is drawn from the current population of 25 year old males, and the following frequency distribution obtained:

- 1 = 11
- 2 = 60
- 3 = 61
- 4 = 59
- 5 = 20
- 6 = 9

[A Gentle Introduction to Stata, Second Edition](#) Alan C. Acock, 2008-09-03 A Gentle Introduction to Stata Second Edition is aimed at new Stata users who want to become proficient in Stata After reading this introductory text new users will not only be able to use Stata well but also learn new aspects of Stata easily Acock assumes that the user is not familiar with any statistical software This assumption of a blank slate is central to the structure and contents of the book Acock starts with the basics for example the portion of the book that deals with data management begins with a careful and detailed example of turning survey data on paper into a Stata ready dataset on the computer When explaining how to go about basic exploratory statistical procedures Acock includes notes that should help the reader develop good work habits This mixture of explaining good Stata habits and good statistical habits continues throughout the book Acock is quite careful to teach the reader all aspects of using Stata He covers data management good work habits including the use of basic do files basic exploratory statistics including graphical displays and analyses using the standard array of basic statistical tools correlation linear and logistic regression and parametric and nonparametric tests of location and dispersion Acock teaches Stata commands by using the menus and dialog boxes while still stressing the value of do files In this way he ensures that all types of users can build good work habits Each chapter has exercises that the motivated reader can use to reinforce the material The tone of

the book is friendly and conversational without ever being glib or condescending Important asides and notes about terminology are set off in boxes which makes the text easy to read without any convoluted twists or forward referencing Rather than splitting topics by their Stata implementation Acock chose to arrange the topics as they would be in a basic statistics textbook graphics and postestimation are woven into the material in a natural fashion Real datasets such as the General Social Surveys from 2002 and 2006 are used throughout the book The focus of the book is especially helpful for those in psychology and the social sciences because the presentation of basic statistical modeling is supplemented with discussions of effect sizes and standardized coefficients Various selection criteria such as semipartial correlations are discussed for model selection The second edition of the book has been updated to reflect new features in Stata 10 and includes a new chapter on the use of factor analysis to develop valid reliable scale measures Publisher's website [The Workflow of Data Analysis Using Stata](#) J. study tutorial and organized around examples It interactively introduces statistical techniques such as data exploration description and regression techniques for continuous and binary dependent variables Step by step readers move through the entire process of data analysis and in doing so learn the principles of Stata data manipulation graphical representation and programs to automate repetitive tasks This third edition includes advanced topics such as factor variables notation average marginal effects standard errors in complex survey and multiple imputation in a way that beginners of both data analysis and Stata can understand Using data from a longitudinal study of private households the authors provide examples from the social sciences that are relatable to researchers from all disciplines The examples emphasize good statistical practice and reproducible research Readers are encouraged to download the companion package of datasets to replicate the examples as they work through the book Each chapter ends with exercises to consolidate acquired skills

**Applied Ordinal Logistic Regression Using Stata** Xing Liu, 2016 The first book to provide a unified framework for both single level and multilevel modeling of ordinal categorical data Applied Ordinal Logistic Regression Using Stata helps readers learn how to conduct analyses interpret the results from Stata output and present those results in scholarly writing Using step by step instructions this non technical applied book leads students applied researchers and practitioners to a deeper understanding of statistical concepts by closely connecting the underlying theories of models with the application of real world data using statistical software

**Regression Models for Categorical Dependent Variables Using Stata, Third Edition** J. Scott Long, Jeremy Freese, 2014-09-10 Regression Models for Categorical Dependent Variables Using Stata Third Edition shows how to use Stata to fit and interpret regression models for categorical data The third edition is a complete rewrite of the book Factor variables and the margins command changed how the effects of variables can be estimated and interpreted In addition the authors views on interpretation have evolved The changes to Stata and to the authors views inspired the authors to completely rewrite their popular SPost commands to take advantage of the power of the margins command and the flexibility of factor variable notation The new edition will interest readers of a previous edition as well as new readers Even though about 150 pages of appendixes were removed the third edition is about 60 pages longer than the second Although regression models for categorical dependent variables are common few texts explain how to interpret such models this text fills the void With the book Long and Freese provide a suite of commands for model interpretation hypothesis testing and model diagnostics The new commands that accompany the third edition make it easy to include powers or interactions of covariates in regression models and work seamlessly with models estimated with complex survey data The authors new

commands greatly simplify the use of margins in the same way that the marginsplot command harnesses the power of margins for plotting predictions The authors discuss how to use margins and their new mchange mtable and mgen commands to compute tables and to plot predictions They also discuss how to use these commands to estimate marginal effects averaged either over the sample or at fixed values of the regressors The authors introduce and advocate a variety of new methods that use predictions to interpret the effect of variables in regression models The third edition begins with an excellent introduction to Stata and follows with general treatments of the estimation testing fit and interpretation of this class of models New to the third edition is an entire chapter about how to interpret regression models using predictions a chapter that is expanded upon in later chapters that focus on models for binary ordinal nominal and count outcomes Long and Freese use many concrete examples in their third edition All the examples datasets and author written commands are available on the authors website so readers can easily replicate the examples with Stata This book is ideal for students or applied researchers who want to learn how to fit and interpret models for categorical data
