Abstract

In our previous work, we study fuzzy Itô integrals driven by a fuzzy Brownian motion. In this article, we continue this study. The purpose of this paper is to study the weak uniqueness of fuzzy stochastic differential equations taking into account fuzzy Brownian motion. For instance, we construct the fuzzy stochastic differential equation driven by a fuzzy Brownian motion. To define and prove our results, we use the fuzzification, the alpha cut method and the Hausdorff distance between two fuzzy quantities. Some results are to our credit in this article like the instance, we construct the fuzzy stochastic differential equation driven by fuzzy Brownian motion. Furthermore, we develop fuzzy Itô calculus driven by a fuzzy Brownian motion. Our result complement existing ones in that the fuzzy version of Brownian motion is taken into account.

Oksendal, 2013-03-09 These notes are based on a postgraduate course I gave on stochastic differential equations at Edinburgh University in the spring 1982 No previous knowledge about the subject was assumed but the presentation is based on some background in measure theory There are several reasons why one should learn more about stochastic differential equations They have a wide range of applications outside mathematics there are many fruitful connections to other mathematical disciplines and the subject has a rapidly developing life of its own as a fascinating research field with many interesting unanswered questions Unfortunately most of the literature about stochastic differential equations seems to place so much emphasis on rigor and completeness that it scares many nonexperts away These notes are an attempt to approach the subject from the nonexpert point of view Not knowing anything except rumours maybe about a subject to start with what would I like to know first of all My answer would be 1 In what situations does the subject arise 2 What are its essential features 3 What are the applications and the connections to other fields I would not be so interested in the proof of the most general case but rather in an easier proof of a special case which may give just as much of the basic idea in the argument And I would be willing to believe some basic results without proof at first stage anyway in order to have time for some more basic applications
