Unit 1: Evolution and Classification

Thinking Practice Questions

1. As a field researcher you are sent to the Arizona desert to study the prairie dog species *C. ludovicianus* to determine if the population is in Hardy-Weinberg equilibrium. Specifically, you are studying this population with respect to the gene that determines the coat color in *C. ludovicianus*. This trait is coded for by a single gene (the NDY6 gene) with two alleles (N, n) and is passed down from one generation to the next. After sampling 170 of these prairie dogs, you find that 36% of the *C. ludovicianus* population is homozygous recessive for coat color. Assuming that the population is in Hardy-Weinberg equilibrium...

a. What is the allele frequency of the N allele?

$q^2 = 0.36 \rightarrow q = 0.6 \dots p + q = 1$ so $p = 0.4$

b. What is the frequency of homozygous dominant prairie dogs?

$p^2 = (0.4)^2 = 0.16$

c. What is the frequency of heterozygous prairie dogs?

$2pq = 2(0.4)(0.6) = 0.48$

d. What conditions must be being satisfied for this population to be in HW equilibrium?

No natural selection, no sexual selection (random mating), no gene flow, no genetic drift, no mutation

2. Sixty flowering plants are planted in a flowerbed. Forty of the plants are red-flowering homozygous dominant. Twenty of the plants are white-flowering homozygous recessive. The plants naturally pollinate and reseed themselves for several years. In a subsequent year, 178 red-flowered plants, 190 pink-flowered plants, and 52 white-flowered plants are found in the flowerbed. Use a chi-square analysis to determine if the population is in Hardy-Weinberg equilibrium.

Total initial population size = 60

$q^2 = 20/60 = 1/3 \rightarrow q = 0.577 \rightarrow p = 0.423$

$p^2 = 0.179$

$2pq = 2(0.423)(0.577) = 0.488$

With a final population size of 420 (178+190+52), if the population is in HW equilibrium, the following values are expected (e)

Red flowered plants = $0.179 \times 420 = 75$

Pink flowered plants = $0.488 \times 420 = 205$

White flowered plants = $0.333 \times 420 = 140$

Chi square analysis

Null Hypothesis : The observed values for red-flowered plants, pink-flowered plants, and white-flowered plants are not significantly different from the expected values predicted by HW equilibrium.

Phenotype	O	e	$(O-e)^2 / e$
Red	178	75	141
Pink	190	205	1
White	52	140	313
		Sum = χ^2	455

Soft Matter Physics Maurice Kleman, Oleg D. Lavrentovich, 2003 The study of soft matter materials with complex properties has raised a number of interesting problems in basic physics biology and materials science all of which promise new and important technological applications After a review of chemical bonds and phase transitions the authors treat topics such as surface phenomena stability of colloidal systems structural properties of polymers and topological defects The monograph's emphasis on underlying physical principles offers a coherent treatment of the great variety of research in the field

Molecular Biology Nancy Lynn Craig, Orna Cohen-Fix, Gisela Storz, 2014 Molecular Biology Principles of Genome Function offers a fresh distinctive approach to the teaching of molecular biology It is an approach that reflects the challenge of teaching a subject that is in many ways unrecognizable from the molecular biology of the 20th century a discipline in which our understanding has advanced immeasurably but about which many intriguing questions remain to be answered It is written with several guiding themes in mind A focus on key principles provides a robust conceptual framework on which students can build a solid understanding of the discipline An emphasis on the commonalities that exist between the three kingdoms of life and the discussion of differences between the three kingdoms where such differences offer instructive insights into molecular processes and components gives students an accurate depiction of our current understanding of the conserved nature of molecular biology and the differences that underpin biological diversity An integrated approach demonstrates how certain molecular phenomena have diverse impacts on genome function by presenting them as themes that recur throughout the book rather than as artificially separated topics At heart molecular biology is an experimental science and a central element to the understanding of molecular biology is an appreciation of the approaches taken to yield the information from which concepts and principles are deduced Yet there is also the challenge of introducing the experimental evidence in a way that students can readily comprehend Molecular Biology responds to this challenge with Experimental Approach panels which branch off from the text in a clearly signposted way These panels describe pieces of research that have been undertaken and which have been particularly valuable in elucidating difference aspects of molecular biology Each panel is carefully cross referenced to the discussion of key molecular biology tools and techniques which are presented in a dedicated chapter at the end of the book Beyond this Molecular Biology further enriches the learning experience with full colour custom drawn artwork end of chapter questions and summaries relevant suggested further readings grouped by topic and an extensive glossary of key terms Among the students being taught today are the molecular biologists of tomorrow these individuals will be in a position to ask fascinating questions about fields whose complexity and sophistication become more apparent with each year that passes Molecular Biology Principles of Genome Function is the perfect introduction to this challenging dynamic but ultimately fascinating discipline
