An Introduction to the Mathematics of Financial Derivatives Ali Hirsra, Salih N. Neftci, 2013-12-18 An Introduction to the Mathematics of Financial Derivatives is a popular intuitive text that eases the transition between basic summaries of financial engineering to more advanced treatments using stochastic calculus Requiring only a basic knowledge of calculus and probability it takes readers on a tour of advanced financial engineering This classic title has been revised by Ali Hirsra who accentuates its well known strengths while introducing new subjects updating others and bringing new continuity to the whole Popular with readers because it emphasizes intuition and common sense An Introduction to the Mathematics of Financial Derivatives remains the only introductory text that can appeal to people outside the mathematics and physics communities as it explains the hows and whys of practical finance problems Facilitates readers understanding of underlying mathematical and theoretical models by presenting a mixture of theory and applications with hands on learning Presented intuitively breaking up complex mathematics concepts into easily understood notions Encourages use of discrete chapters as complementary readings on different topics offering flexibility in learning and teaching

Advances In Statistical Inference For Processes Driven By Fractional Processes: Inference For Fractional Processes B L S Prakasa Rao,2025-07-08 One of the important problems in studying stochastic phenomena is to develop stochastic models and understand their implications behind the phenomenon Long range dependence is an important stochastic phenomena and it needs study of special type of stochastic processes for modelling My earlier book on Statistical Inference for Fractional Diffusion Processes 2010 dealt with several aspects for modelling by fractional Brownian motion This book will contain my work on parametric and nonparametric inference for processes driven by fractional processes such as fractional Brownian motion mixed fractional Brownian motion sub fractional Brownian motion alpha stable noise fractional Levy process and Gaussian processes

An Introduction to Computational Risk Management of Equity-Linked Insurance Runhuan Feng,2018-06-13 The quantitative modeling of complex systems of interacting risks is a fairly recent development in the financial and insurance industries Over the past decades there has been tremendous innovation and development in the actuarial field In addition to undertaking mortality and longevity risks in traditional life and annuity products insurers face unprecedented financial risks since the introduction of equity linking insurance in 1960s As the industry moves into the new territory of managing many intertwined financial and insurance risks non traditional problems and challenges arise presenting great opportunities for technology development Today s computational power and technology make it possible for the life insurance industry to develop highly sophisticated models which were impossible just a decade ago Nonetheless as more industrial practices and regulations move towards dependence on stochastic models the demand for computational power continues to grow While the industry continues to rely heavily on hardware innovations trying to make brute force methods faster and more palatable we are approaching a crossroads about how to proceed An Introduction to Computational Risk Management of Equity Linked Insurance provides a resource for students and entry level professionals to understand the fundamentals of industrial modeling practice but also to give a glimpse of software methodologies for modeling and computational efficiency Features Provides a comprehensive and self contained introduction to quantitative risk management

of equity linked insurance with exercises and programming samples Includes a collection of mathematical formulations of risk management problems presenting opportunities and challenges to applied mathematicians Summarizes state of arts computational techniques for risk management professionals Bridges the gap between the latest developments in finance and actuarial literature and the practice of risk management for investment combined life insurance Gives a comprehensive review of both Monte Carlo simulation methods and non simulation numerical methods Runhuan Feng is an Associate Professor of Mathematics and the Director of Actuarial Science at the University of Illinois at Urbana Champaign He is a Fellow of the Society of Actuaries and a Chartered Enterprise Risk Analyst He is a Helen Corley Petit Professorial Scholar and the State Farm Companies Foundation Scholar in Actuarial Science Runhuan received a Ph D degree in Actuarial Science from the University of Waterloo Canada Prior to joining Illinois he held a tenure track position at the University of Wisconsin Milwaukee where he was named a Research Fellow Runhuan received numerous grants and research contracts from the Actuarial Foundation and the Society of Actuaries in the past He has published a series of papers on top tier actuarial and applied probability journals on stochastic analytic approaches in risk theory and quantitative risk management of equity linked insurance Over the recent years he has dedicated his efforts to developing computational methods for managing market innovations in areas of investment combined insurance and retirement planning
