**Optimization of Small Reservoir Irrigation System for Semi-arid Tropics** Prem Niwas Sharma,1981 For centuries small reservoirs called tanks have been a traditional method of storing water in the semi arid tropics Their use is presently being expanded but as yet no design or location guidelines have been developed This study constructs an optimization procedure for both tank design and location in order to maximize net benefits Two representative traditional tank systems near Hyderabad India were monitored to collect input data for the model and gain insight into the significant design parameters The results of studying the traditional tank systems showed that their overall system water utilization efficiency was four to six times lower than the potential water utilization efficiency This inefficiency was caused by over irrigating

growing water intensive crops e g rice high evaporation and seepage losses from the tank and non optimal tank placement The optimization procedure for designing tanks utilized a modified monlinearr constrained Fletcher Powell algorithm The procedure finds the optimum storage capacity optimum dimensions and optimum location for an elevated inlet type tank shaped as an inverted truncated cone though the model can be modified to suit any definable shape of a tank The model also considers seepage and evaporation losses along with detailed construction costs which account for lead and lift in the excavation work The optimum location of the tank in the catchment is found by placing the tank in a position to maximize runoff considering irrigable area command area Whether or not one tank or several smaller tanks should be constructed is determined by comparing the unconstrained optimum size with the constrained optimum size for the catchment and choosing the minimum of the two The study concludes with a sensitivity analysis to determine the relationship between net benefits vs seepage rates and net benefits vs discount rates Most of the input data concerning soils and crop responses were from studies conducted at the International Crops Research Institute for Semi Arid tropics ICRISAT Hyderabad India *Journal of Agricultural Engineering* ,1997 *Utilisation and Economics of Draught Animal Power* N.
