

#### Problem 4 (Capital Budgeting Techniques)

You are a financial analyst for the Hittle Company. The director of capital budgeting has asked you to analyze two proposed capital investments, Projects X and Y. Each project has a cost of \$10,000, and the cost of capital for each is 12%. The projects' expected net cash flows are as follows:

<u>Year</u>	<u>Expected Net Cash Flows</u>	
	<u>Project X</u>	<u>Project Y</u>
0	-\$10,000	-\$10,000
1	6,500	3,500
2	3,000	3,500
3	3,000	3,500
4	1,000	3,500

- Calculate each project's payback period, net present value, internal rate of return, and profitability index.
- Which project or projects should be accepted if they are independent?
- Which project should be accepted if they are mutually exclusive?
- How might a change in the cost of capital produce a conflict between the NPV and IRR rankings of these two projects? Would this conflict exist if  $r$  were 5%?

Sagner,2007 Capital budgeting techniques that use discounted cash flow analysis are widely recommended in the financial literature and frequently used by business However there is accumulating evidence that companies are reluctant to commit funds to long term projects The most likely explanation is that actual experience has resulted in disappointing returns often below a company s cost of capital No capital budgeting technique currently in use applies probabilities to future inflow estimates to adjust the financial analysis to previous experience with the requesting business unit The discounted payback plus technique recommended in this paper may be a reasonable alternative approach to the analysis of a capital budgeting project yielding more conservative results based on the expected value of cash inflows beyond the point of payback      *Mathematical Programming and the Analysis of Capital Budgeting Problems* H.
