1.4 How Prolog answers questions

- To answer a question, Prolog tries to satisfy all the goals.
- To satisfy a goal means to demonstrate that the goal is true, assuming that the relations in the program is true.
- Prolog accepts facts and rules as a set of axioms(公理), and the user's question as a conjectured (推測的) theorem(定理).
- Example:
  - Axioms: All men are fallible (會犯錯的).
             Socrates is a man.
  - Theorem: Socrates is fallible.
  - For all X, if X is a man then X is fallible.
             fallible(X) :- man(X).
             man(socrates).
    - ?- fallible(socrates).
