Rough Sets Z. Pawlak,1991-10-31 To date computers are supposed to store and exploit knowledge At least that is one of the aims of research fields such as Artificial Intelligence and Information Systems However the problem is to understand what knowledge means to find ways of representing knowledge and to specify automated machineries that can extract useful information from stored knowledge Knowledge is something people have in their mind and which they can express through natural language Knowledge is acquired not only from books but also from observations made during experiments in other words from data Changing data into knowledge is not a straightforward task A set of data is generally disorganized contains useless details although it can be incomplete Knowledge is just the opposite organized e.g. laying bare dependencies or classifications but expressed by means of a poorer language i.e. pervaded by imprecision or even vagueness and assuming a level of granularity One may say that knowledge is summarized and organized data at least the kind of knowledge that computers can store
