Bone, 2012-04-26 The Canadian North Issues and Challenge Fourth Edition is a comprehensive survey of the geographic economic political and social dimensions of the Arctic region [The Geography of the Canadian North](#) Robert M. Bone, 1992 As arctic and Subarctic of the Canadian North take their place in the global economy the interplay of resource development the environment and the peoples of the North has caused dramatic change This book examines the dominant images of the North and traces the impact of resource exploitation and mega projects such as Quebec Hydro s massive James Bay development It includes a discussion of the effects on people s lives Native people southern Canadians and the growth of regional centres and resource towns With detailed illustrations and problem oriented discussion of the Canadian North this volume will provide a balanced look for those concerned with the human and environmental costs of development **The New Arctic** Birgitta Evengård, Joan Nyman Larsen, Øyvind Paasche, 2015-06-11 In the late 18th century explorers and scientists started venturing into the Arctic in a heroic and sometimes deadly effort to understand and unveil the secrets of the unforgiving and mysterious polar region of the high north Despite that the Arctic was already populated mattered less for the first wave of polar researchers and explorations who nevertheless brought back valuable knowledge Today the focus in Arctic science and discourse has changed to one which includes the peoples and societies and their interaction with the world beyond The image of a static Arctic heralded first by explorers prevailed for a long time but today the eyes of the World see the Arctic very differently Few if any other places on Earth are currently experiencing the kind of dramatic change witnessed in the Arctic According to model forecasts these changes are likely to have profound implications on biophysical and human systems and will accelerate in the decades to come The New Arctic highlights how and in what parts the natural and political system is being transformed We re talking about a region where demography culture and political and economic systems are increasingly diverse although many common interests and aspects remain and with the new Arctic now firmly placed in a global context Settlements range from small predominantly indigenous communities to large industrial cities and all have a link to the surrounding environment be it glaciers or vegetation or the ocean itself The New Arctic contributes to our further understanding of the changing Arctic It offers a range of perspectives which reflect the deep insight of a variety

of scientific scholars across many disciplines bringing a wide range of expertise The book speaks to a broad audience including policy makers students and scientific colleagues

A Place Called Nunavut Karin Irma Margot van Dam, Kim van Dam, 2008 In 1999 Nunavut Territory was created in the Canadian Arctic The area is about 50 times as large as the Netherlands and is inhabited by a population of 30 000 85% of the population is Inuit the indigenous people in this area The central questions in this research project are what place or regional identities are being ascribed to Nunavut by different groups of people from within and from outside the region and how do these identities work In the process of the formation of the region the territorial Government of Nunavut is an important actor in producing a regional identity that is based on the cultural identity of the Inuit the Inuit Homeland This official regional identity creates a symbolic unity that is important in linking people to the region and through which the land the history and the people are united in a new territorial membership However there is no reason to assume that there is only one regional identity for Nunavut Different individuals or groups of people from within and from outside the region such as the people who live in one of the 25 communities and those who work for the multinational mining corporations or as tourist operators are also involved in the production and reproduction of identities for Nunavut They represent Nunavut for example as a place to live a resource region a wilderness or as a sustainable place Nunavut Government also links these alternative identities to the area because as a government they are not only interested in protecting Inuit culture but also aim to modernize the economy in order to enhance prosperity and well being As such the place identities are hybrid and identities that before were produced only by external actors are now also being produced by internal actors and vice versa

The Scramble for the Poles Klaus Dodds, Mark Nuttall, 2015-11-30 In August 2007 a Russian flag was planted under the North Pole during a scientific expedition triggering speculation about a new scramble for resources beneath the thawing ice But is there really a global grab for Polar territory and resources Or are these activities vastly exaggerated In this rich and wide ranging book Klaus Dodds and Mark Nuttall look behind the headlines and hyperbole to reveal a complex picture of the so called scramble for the poles Whilst anxieties over the potential for conflict and the destruction of what is often perceived as the world's last wildernesses have come to dominate Polar debates and are to some extent justified their study also highlights longer historical and geographical patterns and processes of human activity in these remote territories Over the past century Polar landscapes have been probed drilled fished tested on and dug up as their indigenous populations have struggled to protect their rights and interests No longer remote places or themselves poles apart from one another the contemporary geopolitics of the Polar regions has lessons for us all as we confront a warming world where access to resources is a concern for states big and small
