innovative practices in the uses of computer and communications technologies to support teaching and learning. Relatively recently enough, experience has been accumulated to justify significant investment in implementing systems across a broad range of educational and training domains. Much of this experience has been pragmatic and attempts to place the activity within a substantive cognitive framework have not met with much success. Lessons have been learnt from the experience but there are many complex issues of knowledge representation, acquisition, and long-term accommodation linked to the role of human actors and technological tools. This publication divides its exploration of the intricacies of the field into four key areas. Theme A takes a cognitive psychologist's approach to learning processes. It is concerned with the ways in which knowledge is stored or represented inside the human mind; it is also concerned with knowledge acquisition and knowledge structures and their relation to learning environment design. Theme B takes an educationalist's perspective of learning. It takes the learner as the focus and examines learning styles, teaching styles, collaborative learning, etc. Theme C focuses on the design of learning tasks and environments with considerations of design principles of exploratory or expressive materials. It is strongly domain-orientated. Theme D focuses on knowledge architectures as they can be created in a machine and so includes the formalisms and models required in artificial intelligence applications to learning. In addition to providing a comprehensive consideration of the problems faced and solutions so far achieved, it is hoped the book will stimulate further research and funding in an area that simply cannot be ignored.

Popular Mechanics, 1915 *Current Developments in Knowledge Acquisition* Thomas Wetter, 1992

Methodological knowledge acquisition and knowledge engineering have achieved increasing attention in recent years due both to active research projects and to successful practical applications. Both aspects have over the years been reflected in the structure of the European Knowledge Acquisition Workshops (EKAW) where a users forum has always been combined with a scientific workshop. This volume contains the proceedings of EKAW 92. The papers are organized into five thematic sections on Technology transfer, General modelling approaches, Knowledge formalization and automated methods, Elicitation and diagnosis of human knowledge, Practice and experiences of knowledge acquisition. A total of 65 persons from around the world served as the program committee. Their recommendations and sometimes very detailed comments helped both workshop organizers and individual authors to achieve the high quality reflected in this volume.
