

- Managers are always trying to make better estimates of what will happen in the future in the face of uncertainty. Making good estimates is the main purpose of **forecasting** - The art and science of predicting future events.
- An increasingly complex world economy makes forecasting challenging
- It may be a subjective or an intuitive prediction. It may be based on demand-driven data. Or the forecast may involve a combination of these, that is, a mathematical model adjusted by a manager's good judgment.
- There is seldom one superior method of forecasting.
- Because there are limits to what can be expected from forecasts, we develop *error measures*. Preparing and monitoring forecasts can also be costly and time consuming.
- Effective planning in both the short run and long run depends on a forecast of demand for the company's products.

Learning Objective 4.1 - Understand the three time horizons and which models apply for each

- A forecast is usually classified by the future time horizon that it covers. Time horizons fall into three categories:
 1. **Short-range forecast:** This forecast has a time span of up to 1 year but is generally less than 3 months. It is used for planning purchasing, job scheduling, workforce levels, job assignments, and production levels.
 2. **Medium-range forecast:** A medium-range, or intermediate, forecast generally spans from 3 months to 3 years. It is useful in sales planning, production planning and budgeting, cash budgeting, and analysis of various operating plans.
 3. **Long-range forecast:** Generally 3 years or more in time span, long-range forecasts are used in planning for new products, capital expenditures, facility location or expansion, and research and development.
- Medium- and long-range forecasts are distinguished from short-range forecasts by three features:
 1. Intermediate and long-range forecasts deal with more comprehensive issues supporting management decisions regarding planning and products, plants, and processes.
 2. Short-term forecasting usually employs different methodologies than longer-term forecasting. Mathematical techniques, such as moving averages, exponential smoothing, and trend extrapolation are common to shortrun projections.
 3. Short-range forecasts tend to be more accurate than longerrange forecasts. As the time horizon lengthens, it is likely that forecast accuracy will diminish.
- Organizations use three major types of forecasts in planning future operations:
 1. **Economic forecasts** address the business cycle by predicting inflation rates, money supplies, housing starts, and other planning indicators.
 2. **Technological forecasts** are concerned with rates of technological progress

Heizer Chapter 4 Solutions:

Graphing Culture Change in North American Archaeology R. Lee Lyman, 2021-06-10 Documentation analysis and explanation of culture change have long been goals of archaeology. Scientific graphs facilitate the visual thinking that allow archaeologists to determine the relationship between variables and if well designed comprehend the processes implied by the relationship. Different graph types suggest different ontologies and theories of change and particular techniques of parsing temporally continuous morphological variation of artefacts into types influence graph form. North American archaeologists have grappled with finding a graph that effectively and efficiently displays culture change over time. Line graphs, bar graphs, and numerous one off graph types were used between 1910 and 1950, after which spindle graphs displaying temporal frequency distributions of specimens within each of multiple artefact types emerged as the most readily deciphered diagram. The variety of graph types used over the twentieth century indicate archaeologists often mixed elements of both Darwinian variational evolutionary change and Midas touch like transformational change. Today there is minimal discussion of graph theory or graph grammar in introductory archaeology textbooks or advanced texts and elements of the two theories of evolution are still mixed. Culture has changed and archaeology provides unique access to the totality of humankind's cultural past. It is therefore crucial that graph theory construction and decipherment are revived in archaeological discussion.
