Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

All of Nonparametric Statistics Larry Wasserman, 2006-09-10 There are many books on various aspects of nonparametric inference such as density estimation nonparametric regression bootstrapping and wavelets

methods But it is hard to find all these topics covered in one place The goal of this text is to provide readers with a single book where they can find a brief account of many of the modern topics in nonparametric inference The book is aimed at master's level or Ph D level statistics and computer science students It is also suitable for researchers in statistics machine learning and data mining who want to get up to speed quickly on modern nonparametric methods My goal is to quickly acquaint the reader with the basic concepts in many areas rather than tackling any one topic in great detail In the interest of covering a wide range of topics while keeping the book short I have opted to omit most proofs Bibliographic remarks point the reader to references that contain further details Of course I have had to choose topics to include and to omit the title notwithstanding For the most part I decided to omit topics that are too big to cover in one chapter For example I do not cover classification or nonparametric Bayesian inference The book developed from my lecture notes for a half semester 20 hours course populated mainly by master's level students For Ph D
