Fourier Modal Method and Its Applications in Computational

Nanophotonics Hwi Kim, Junghyun Park, Byoung-ho Lee, 2017-12-19. Most available books on computational electrodynamics are focused on FDTD, FEM, or other specific techniques developed in microwave engineering. In contrast, Fourier Modal Method and Its Applications in Computational Nanophotonics is a complete guide to the principles and detailed mathematics of the up-to-date Fourier modal method of optical analysis. It takes readers through the implementation of MATLAB codes for practical modeling of well-known and promising nanophotonic structures. The authors also address the limitations of the Fourier modal method. Features: Provides a comprehensive guide to the principles, methods, and mathematics of the Fourier modal method. Explores the emerging field of computational nanophotonics. Presents clear step-by-step practical explanations on how to use the Fourier modal method for photonics and nanophotonics applications. Includes the necessary MATLAB codes enabling readers to construct their own code. Using this book, graduate students and researchers can learn about nanophotonics simulations through a comprehensive treatment of the mathematics underlying the Fourier modal method and examples of practical problems solved with MATLAB codes.

Wireless and Guided Wave Electromagnetics Le Nguyen Binh, 2017-07-12. Wireless communications allow high-speed mobile access to a global Internet based on ultra-wideband backbone, intercontinental, and terrestrial networks. Both of these environments support the carrying of information via electromagnetic waves that are wireless in free air or guided through optical fibers. **Wireless and Guided Wave Electromagnetics: Fundamentals and Applications** explores the fundamental aspects of electromagnetic waves in wireless media and wired guided media. This is an essential subject for engineers and physicists working with communication technologies, mobile networks, and optical communications. This comprehensive book builds from the basics to modern topics in electromagnetics for wireless and optical fiber communication. Examines wireless radiation and the guiding of optical waves which are crucial for carrying high-speed information in long-reach optical networking scenarios. Explains the physical phenomena and practical aspects of guiding optical waves that may not require detailed electromagnetic solutions. Explores applications of electromagnetic waves in optical communication systems and networks based on frequency domain transfer functions in the linear regions, which simplifies the physical complexity of the waves but still allows them to be examined from a system engineering perspective. Uses MATLAB and Simulink models to simulate and illustrate the electromagnetic fields. Includes worked examples, laboratory exercises, and problem sets to test understanding. The book's modular structure makes it suitable for a variety of courses for self-study or as a resource for research and development. Throughout the author

emphasizes issues commonly faced by engineers Going a step beyond traditional electromagnetics textbooks this book highlights specific uses of electromagnetic waves with a focus on the wireless and optical technologies that are increasingly important for high speed transmission over very long distances

Essentials of Modern Communications Djafar K. Mynbaev, Lowell L. Scheiner, 2020-08-04 Explore Modern Communications and Understand Principles of Operations Appropriate Technologies and Elements of Design of Communication Systems Modern society requires a different set of communication systems than has any previous generation To maintain and improve the contemporary communication systems that meet ever changing requirements engineers need to know how to recognize and solve cardinal problems In Essentials of Modern Communications readers will learn how modern communication has expanded and will discover where it is likely to go in the future By discussing the fundamental principles methods and techniques used in various communication systems this book helps engineers assess troubleshoot and fix problems that are likely to occur In this reference readers will learn about topics like How communication systems respond in time and frequency domains Principles of analog and digital modulations Application of spectral analysis to modern communication systems based on the Fourier series and Fourier transform Specific examples and problems with discussions around their optimal solutions limitations and applications Approaches to solving the concrete engineering problems of modern communications based on critical logical creative and out of box thinking For readers looking for a resource on the fundamentals of modern communications and the possible issues they face Essentials of Modern Communications is instrumental in educating on real life problems that engineering students and professionals are likely to encounter

MATLAB Implementation of a Fourier Approach to Optical Wave Propagation Nicholas Lee, Naval Postgraduate School (U.S.), 1998-09-01 This thesis explores a MATLAB implementation of a Fourier transform approach to model and predict transient optical wave propagation through free space A three step approach is adopted in this study First the mathematical development establishes the importance of the total impulse response as the Green s function meeting the boundary conditions and solving the wave equation Second a MATLAB program is developed to simulate the mathematical model by computing and displaying the graphical representation of an optical wave s spatial distribution on a plane at a given distance from a spatially filtered source Third a circular excitation function is used to verify the program and then the results of another three excitations namely the square circularly truncated Gaussian and circularly truncated Bessel functions are similarly generated The effort of this thesis provides an inexpensive means to analyze a transient optical wave propagation of a spatially filtered optical source
