TYPES OF CULTURE MEDIA

Media are classified on the basis of composition or application. Usually, a particular medium may fall into two or more categories, which leads to some confusion among students. Thus, for example, a "defined" medium might be also classified as "selective" or "differential" depending upon its specific properties and application in a particular situation. The four principal types of culture media are described below.

COMPLEX MEDIA. Pasteur, Koch, and Tyndall typically prepared media by boiling animal or plant materials to extract nutritive molecules. Today, many modern complex media (such as Tryptic Soy Agar) contain extracts of beef (peptone), milk (tryptone), soybean meal (soytone), or yeast. The protein in these extracts is broken down into small peptides and amino acids. Although the specific amount of these molecules is not precisely determined, their wide assortment allows complex media to support a wide range of bacterial types.

TRYPTIC SOY BROTH (TSB)	
Component	g/L medium
Tryptone	17.0
Soytone	3.0
NaCl	5.0
K ₂ HPO ₄	2.5
Glucose	2.5
	<hr/> 30.0

DEFINED MEDIA. Defined media are formulated from pure substances at predetermined concentrations. Thus, unlike complex media, the exact chemical composition of defined media is known precisely. Because the composition is precisely established, defined media are often used to determine the nutritional requirements of bacterial species.

SELECTIVE MEDIA. Complex or defined media may also be classified as selective for ENRICHMENT media, which support the growth of only certain types of bacteria. Media can be made selective through the addition of substances that enhance or inhibit the growth of particular types of bacteria.

DIFFERENTIAL MEDIA. Any of the above types of media might also be formulated as a differential medium. A differential medium reveals specific metabolic or metabolic characteristics of bacteria grown on it. Differential media are among the most powerful tools available to a microbiologist, revealing a wide range of information about an organism very quickly. Some media are both selective and differential. For example, the medium called

Migration, Diaspora and Information Technology in Global Societies Leopoldina Fortunati, Raul Pertierra, Jane Vincent, 2013-03-01 Migrants and diaspora communities are shaped by their use of information and communication technologies. This book explores the multifaceted role played by new media in the re-location of these groups of people, assisting them in their efforts to defeat nostalgia, construct new communities and keep connected with their communities of origin. Furthermore, the book analyses the different ways in which migrants contribute along with natives in co-constructing contemporary societies, a process in which the cultures of both groups are considered. Drawing on contributions from a range of disciplines including sociology, anthropology, psychology and linguistics, it offers a more profound understanding of one of the most significant phenomena of contemporary international societies: the migration of nearly a billion people worldwide and the relationship between technology and society.

Class, ethnicity and religion in the Bengali East End Sarah Glynn, 2016-05-16 This exploration of one of the most concentrated immigrant communities in Britain combines a fascinating narrative history, an original theoretical analysis of the evolving relationship between progressive left politics and ethnic minorities, and an incisive critique of political multiculturalism. It recounts and analyses the experiences of many of those who took part in over six decades of political history that range over secular nationalism, trade unionism, black radicalism, mainstream local politics, Islamism and the rise and fall of the Respect Coalition. Through this Bengali case study and examples from wider immigrant politics, it traces the development and adoption of the concepts of popular frontism, revolutionary stages theory and identity politics. It demonstrates how these theories and tactics have cut across class-based organisation and acted as an impediment to addressing socio-economic inequality, and it argues for a left materialist alternative. It will appeal equally to sociologists, political activists and local historians.

Simulation in Computational Finance and Economics: Tools and Emerging Applications Alexandrova-Kabadjova, Biliana, Martinez-Jaramillo, Serafin, Garcia-Almanza, Alma Lilia, Tsang, Edward, 2012-08-31 Simulation has become a tool difficult to substitute in many scientific areas like manufacturing, medicine, telecommunications, games, etc. Finance is one of such areas where simulation is a commonly used tool. For example, we can find Monte Carlo simulation in many financial applications like market risk analysis, portfolio optimization, credit risk related

applications etc Simulation in Computational Finance and Economics Tools and Emerging Applications presents a thorough collection of works covering several rich and highly productive areas of research including Risk Management Agent Based Simulation and Payment Methods and Systems topics that have found new motivations after the strong recession experienced in the last few years Despite the fact that simulation is widely accepted as a prominent tool dealing with a simulation based project requires specific management abilities of the researchers Economic researchers will find an excellent reference to introduce them to the computational simulation models The works presented in this book can be used as an inspiration for economic researchers interested in creating their own computational models in their respective fields
