

## UNIT 1

1) What is machine learning? Explain supervised, unsupervised and reinforcement learning? (split into three different question for three different sets)

**Answer: -**

- Machine learning, from a systems perspective, is defined as the creation of automated systems that can learn **hidden patterns** from data to aid in making intelligent decisions.
- This motivation is loosely inspired by how the human brain learns certain things based on the data it perceives from the outside world. Machine learning is the systematic study of algorithms and systems that improve their knowledge or performance with experience.
- A Machine Learning system learns from historical data, builds the prediction models, and whenever it receives new data, predicts the output for it. The accuracy of predicted output depends upon the amount of data, as the huge amount of data helps to build a better model which predicts the output more accurately.
- Suppose we have a complex problem, where we need to perform some predictions, so instead of writing a code for it, we just need to feed the data to generic algorithms, and with the help of these algorithms, machine builds the logic as per the data and predict the output.
- Two definitions of Machine Learning are offered.

**Arthur Samuel** described it as: "The field of study that gives computers the ability to learn from data without being explicitly programmed." This is an older, informal definition.

**Tom Mitchell** provides a more modern definition.

Advanced Lectures on Machine Learning Shahar Mendelson, Alexander J. Smola, 2003-07-01 Machine Learning has become a key enabling technology for many engineering applications and theoretical problems alike To further discussions and to disseminate new results a Summer School was held on February 11-22 2002 at the Australian National University The current book contains a collection of the main talks held during those two weeks in February presented as tutorial chapters on topics such as Boosting Data Mining Kernel Methods Logic Reinforcement Learning and Statistical Learning Theory The papers provide an in depth overview of these exciting new areas contain a large set of references and thereby provide the interested reader with further information to start or to pursue his own research in these directions Complementary to the book a recorded video of the presentations during the Summer School can be obtained at <http://mlg.anu.edu.au/summer2002> It is our hope that graduate students lecturers and researchers alike will find this book useful in learning and teaching Machine Learning thereby continuing the mission of the Summer School Canberra November 2002 Shahar Mendelson Alexander Smola Research School of Information Sciences and Engineering The Australian National University Thanks and Acknowledgments We gratefully thank all the individuals and organizations responsible for the success of the workshop

**Mathematics of Deep Learning** Leonid Berlyand, Pierre-Emmanuel Jabin, 2023-04-27 The goal of this book is to provide a mathematical perspective on some key elements of the so called deep neural networks DNNs Much of the interest in deep learning has focused on the implementation of DNN based algorithms Our hope is that this compact textbook will offer a complementary point of view that emphasizes the underlying mathematical ideas We believe that a more foundational perspective will help to answer important questions that have only received empirical answers so far The material is based on a one semester course Introduction to Mathematics of Deep Learning for senior undergraduate mathematics majors and first year graduate students in mathematics Our goal is to introduce basic concepts from deep learning in a rigorous mathematical fashion e.g. introduce mathematical definitions of deep neural networks DNNs loss functions the backpropagation algorithm etc We attempt to identify for each concept the simplest setting that minimizes technicalities but still contains the key mathematics
