Algomedia. The Image at the Time of Artificial Intelligence Pietro Conte, Anna Caterina Dalmasso, Maria Giulia Dondero, Andrea Pinotti, 2026-02-18 Contemporary media ecosystems are deeply entangled with algorithms which play an increasingly pervasive role in shaping our environment and mediating our perception of reality This book aims to provide a critical map of a rapidly evolving mediascape in which humans machines and data negotiate forms of agency cultural imaginaries and scopic regimes In particular the volume addresses the multiple challenges posed by algorithmic media within the domain of visual culture and identifies a paradigmatic shift in the age of artificial intelligence images are no longer merely captured or represented they are synthesized inferred and predicted by probabilistic models As active agents shaping creativity and meaning making AI systems carry far reaching epistemological aesthetic and political implications They open new possibilities for content accessibility and participatory engagement yet they also encode existing asymmetries Trained on massive datasets machine learning models often reproduce structural biases amplify cultural and social exclusions and perpetuate inequalities At the same time algorithmic systems are being subverted and reappropriated by artists and curators transforming them into sites of resistance and experimentation for imagining alternative futures Bringing together perspectives from computer science semiotics philosophy critical theory aesthetics art theory visual culture and film and media studies this book sets out an interdisciplinary exploration to make key concepts such as algorithm latent space neural networks generative models and NFTs accessible to a humanities audience while providing a set of critical tools to interrogate both the ruptures and continuities that define this ongoing transformation The contributions span a wide array of topics from machine vision and facial recognition to social robots from computational art analysis to generative AI distributed authorship and curatorial practices from biometric surveillance and predictive modeling to the politics of datasets and decolonial critique from virtual and augmented reality to posthuman imagery digital afterlives and AI mediated memory Compelling us to revisit foundational categories in media studies this book offers an analytical framework to open a debate that is not merely about technology s impact but about how algorithms have become the media themselves veritable

Bone Cancer Dominique Heymann,2021-09-23 Bone Cancer Bone Sarcomas and Bone Metastases From Bench to Bedside Third Edition comprehensively investigates key discoveries in the field of bone biology New aspects of bone cancer biology are treated in new chapters covering exosomes autophagy and metabolism These have led to the development of entirely new areas for investigation such as therapies which combine surgery and biological approaches The Third Edition expands on the original overview of bone cancer development physiology and pathophysiology with 40% new material Each chapter has been written by internationally recognized specialists on the bone cancer microenvironment bone metastases osteoclast biology in bone cancer proteomics bone niche circulating tumor cells and clinical trials Given the global prevalence of breast and prostate cancers knowledge of bone biology has become essential for everyone within the medical and cancer research communities Bone Cancer Bone Sarcomas and Bone Metastases From Bench to Bedside continues to offer the only translational reference to cover all aspects of primary bone cancer and bone metastases This revision opens the door to myeloma with two short chapters dedicated to this bone associated disease Covers the broad field of bone sarcomas and bone metastases from basic research to clinical approaches Presents comprehensive and translational overview of biological and clinical aspects of bone cancers discussing pathophysiology from genetic and molecular levels using the most recent evidence Provides a common language for cancer researchers bone

biologists oncologists and radiologists to discuss bone tumors and how bone cancer metastases affects each major organ system Offers insights to research clinicians oncologists and radiologists into understanding the molecular basis of bone cancer leading to more well informed diagnoses and treatment of tumors and metastases Offers insights to bone biologists into how clinical observations and practices can feed back into the research cycle and therefore can contribute to the development of more targeted genomic and proteomic assays

Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience
