

HEALTHY SLEEP HABITS

Improve your sleep with some positive lifestyle changes and consistent sleep habits

1 REGULAR SLEEP SCHEDULE

Try to maintain a consistent sleep pattern 7 days a week. Getting up at the same time every day can help.

2 RELAXING BEDTIME ROUTINE

Spend time before bed relaxing: read a book, meditate, stretch, do yoga, have a shower or bath. Avoid difficult conversations, activities or work.

3 AVOID STIMULANTS

Don't drink caffeine, sugary or energy drinks in the evening. Avoid nicotine before bed. Only drink alcohol in moderation at night, if at all.

4 GOOD SLEEP ENVIRONMENT

Keep your bedroom clean, tidy and comfortable. Use a quality mattress and bedding. Keep the bedroom aired, and a temperature between 60 -70 °F (17-21 °C)

5 BLOCK OUT NOISE AND LIGHT

Make sure the bedroom is dark and quiet. Use blackout curtains or a sleep mask. Use earplugs, white noise, a fan or music to mask external noise.

6 ONLY SLEEP AND INTIMACY

Only use the bed for sleep and intimacy with a partner. Avoid watching TV or using other devices in bed. That will help associate the bed with sleep.

7 EXERCISE AND DAYLIGHT

Try to do regular exercise, but not too intense before bedtime. Spend time outside in the daylight. Even a short walk during the day can improve sleep.

8 EAT WELL

Try to eat a balanced, healthy diet. Avoid heavy, fatty, fried or spicy food late in the evening if you get indigestion. Bananas, yogurt or healthy cereal are good bedtime snacks.

Advanced Sleep Hygiene Tips Explained:

Geriatric Medicine Christine K. Cassel, Rosanne Leipzig, Harvey Jay Cohen, Eric B. Larson, Diane E. Meier, 2006-05-29
Since the publication of the third edition of *Geriatric Medicine* extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many if not most of the age related disorders that threaten the quality of life in older years At the most basic level the successful mapping of the human genome was declared complete in the fall of 2000 Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates on which much of the research on the aging human brain is done The genetic maps of all of these species including our own does not answer clinical questions but it does open the door to dramatic rapid and efficient answers to questions about the genetic polymorphisms related to diseases in humans The telomerase story also unfolded since the third edition Telomerase is an enzyme responsible for maintaining the telomeres the redundant DNA portions at the end of chromosomes whose shortening seems to be linked directly to cell senescence apoptosis and the control over cell death which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism
