Learn Esp32 with Arduino Janani Sathish, 2021-07-25 I want to go over some of the reasons why in my opinion the ESP 32 is an incredible

microcontroller and why you should use it in your IoT projects For starters the ESP 32 is very powerful It contains a dual core CPU that can be clocked at 8 160 or 240 megahertz That s quite a lot of computing power in a reasonably small It also has a ULP or ultra low power coprocessor And this is a much slower process or they can be used to perform smaller tasks while the big dual core CPU is in a night of sleep Now besides killer processors the ESP 32 also has a ton of memory It includes 512 kilobytes of on chip SRAM memory used for data and programs instructions Besides this there s also support for external memory and depending on your board that might be as much as four to eight megabytes This means that the ESP 32 is also suitable for some heavier tasks like connecting with cameras recognizing speech streaming data from the internet And But the biggest reason why I think this chip is so good is that it has built in wifi and Bluetooth So no need for additional radio modules like you would see on most Arduino boards the ESP 32 is just one chip with everything in one package The rest of the IO is pretty impressive as well
