remain important centres of research in various fields of fluid mechanics aerospace engineering hydraulics and naval engineering Burgers and others developed mathematical experimental and numerical approaches of a broad range of fluid flows some of their achievements have become well known worldwide and can be seen as highlights of Dutch fluid mechanics From the 1950s stromingsleer flow theory attained a permanent and respected place in the curriculum and research of technical universities at many old and new research institutes and also at several industrial research laboratories In the 1980s fluid mechanics finally became recognized as a serious branch of physics and an important field of applied science This resulted in a close cooperation between academic groups institutes and industry and the foundation of the Burgerscentrum the Research School for Fluid Mechanics in the Netherlands One hundred years after Burgers appointment in Delft Dutch fluid mechanics is still very much alive This volume gives a full account of its rich history and also offers a view on the broad range of areas of application transport energy production biology and medicine production processes etc It has been written not only for those working in this field but also for those interested in the history of Dutch science and in the development of science and the fascinating world of fluid flow phenomena

Fluid Structure Interaction II Hans-Joachim Bungartz, Miriam Mehl, Michael Schäfer, 2010-09-28 Fluid structure interactions FSI i e the interplay of some moveable or deformable structure with an internal or surrounding fluid are among the most widespread and most challenging coupled or multi physics problems Although much has been accomplished in developing good computational FSI methods and despite convincing solutions to a number of classes of problems including those presented in this book there is a need for more comprehensive studies showing that the computational methods proposed are reliable robust and efficient beyond the classes of problems they have successfully been applied to This volume of LNCSE a sequel to vol 53 which contained among others the first numerical benchmark for FSI problems and has received considerable attention since then presents a collection of papers from the First International Workshop on Computational Engineering special focus FSI held in Herrsching in October 2009 and organized by three DFG funded consortia The papers address all relevant aspects of FSI simulation and discuss FSI from the mathematical informatical and engineering perspective
