Disruptive Wide Bandgap Semiconductors, Related Technologies, and Their Applications Yogesh Kumar Sharma, 2018-09-12 SiC and GaN devices have been around for some time The first dedicated international conference on SiC and related devices ICSCRM was held in Washington DC in 1987 But only recently the commercialization of SiC and GaN devices has happened Due to its

material properties Si as a semiconductor has limitations in high temperature high voltage and high frequency regimes With the help of SiC and GaN devices it is possible to realize more efficient power systems Devices manufactured from SiC and GaN have already been impacting different areas with their ability to outperform Si devices Some of the examples are the telecommunications automotive locomotive power and renewable energy industries To achieve the carbon emission targets set by different countries it is inevitable to use these new technologies This book attempts to cover all the important facets related to wide bandgap semiconductor technology including new challenges posed by it This book is intended for graduate students researchers engineers and technology experts who have been working in the exciting fields of SiC and GaN power devices

Simulation Tools and Techniques Dingde Jiang,Houbing Song,2022-03-30 This proceedings constitutes the refereed post conference proceedings of the 13th International Conference on Simulation Tools and Techniques SIMUTools 2021 held in November 2021 Due to COVID 19 pandemic the conference was held virtually The 63 revised full papers were carefully selected from 143 submissions The papers focus on new results in the field of system modeling and simulation software simulation communication networks modeling and analysis AI system simulation and performance analysis big data simulation analysis addressing current and future trends in simulation techniques They are grouped in thematic aspects on wireless communication big data modeling and simulation deep learning network simulation and life and medical sciences

Investigation of a GaN-based Power Supply Topology Utilizing Solid State Transformer for Low Power Applications Akrem Mohamed Elrajoubi,2018 Gallium nitride GaN power devices exhibit a much lower gate capacitance for a similar on resistance than its silicon counterparts making it highly desirable for high frequency operation in switching converters which leads to their significant benefits on power density cost and system volume High density switching converters are being realized with GaN power devices due to their high switching speeds that reduce the size of energy storage circuit components The purpose of this dissertation research is to investigate a new isolated GaN AC DC switching converter based on solid state transformer configuration with a totem pole power factor corrector PFC front end a half bridge series resonant converter SRC for power conversion and a current doubler rectifier CDR at its output A new equivalent circuit model for the converter is constructed consisting of a loss free resistor model for

the PFC rectifier with first harmonic approximation model for the SRC and the CDR Then state space analysis is performed to derive the converter transfer function in order to design the controllers to yield sufficient phase margins The converter offers the advantages of voltage regulation feature of the solid state transformer low harmonics and close to unity power factor of the PFC rectifier soft switching of the half bridge SRC reduced size of the high frequency transformer and smaller leakage inductance of the CDR which is used for low voltage high current applications as the CDR draws half of the load current in the transformer secondary side yielding less copper losses A high frequency nanocrystalline toroid transformer based on a modified equation to determine its leakage inductance is designed and fabricated to satisfy the performance specifications of the converter A meticulously planned gate driving strategy together with a Kelvin source return circuitry is used to mitigate Miller effects minimize gate ringing and minimize the parasitics of the pull down and pull up loops of the converter A new programming method that combines MATLAB Simulink embedded coder with code composer studio for the TMS320F28335 digital signal processor DSP controller is developed and demonstrated Finally the GaN based AC DC converter is experimentally verified for a 120Vac to 48Vdc 60Vdc conversion operating at 100 kHz for various loadings
