Nirmal Singh, 2012-10-13 This monograph is devoted to the theory and development of autonomous navigation of mobile robots using computer vision based sensing mechanism. The conventional robot navigation systems utilizing traditional sensors like ultrasonic IR GPS laser sensors etc suffer several drawbacks related to either the physical limitations of the sensor or incur high cost. Vision sensing has emerged as a popular alternative where cameras can be used to reduce the overall cost maintaining high degree of intelligence flexibility and robustness. This book includes a detailed description of several new approaches for real life vision based autonomous navigation algorithms and SLAM. It presents the concept of how subgoal based goal driven navigation can be carried out using vision sensing. The development concept of vision based robots for path line tracking using fuzzy logic is presented as well as how a low cost robot can be indigenously developed in the laboratory with microcontroller based sensor systems. The book describes successful implementation of integration of low cost external peripherals with off the shelf procured robots. An important highlight of the book is that it presents a detailed step by step sample demonstration of how vision based navigation modules can be actually implemented in real life under 32 bit Windows environment. The book also discusses the concept of implementing vision based SLAM employing a two camera based system. **Visual Perception for Manipulation and Imitation in Humanoid Robots** Pedram Azad, 2009-11-19 Dealing with visual perception in robots and its applications to manipulation and imitation this monograph focuses on stereo based methods and systems for object recognition and 6 DoF pose estimation as well as for marker less human motion capture. **English Mechanic and Mirror of Science and Art**, 1887 **Recent Advances in Trace Elements** Katarzyna Chojnacka, Agnieszka Saeid, 2018-02-23 Comprehensive and multidisciplinary presentation of the current trends in trace elements for human animals plants and the environment. This reference provides the latest research into the presence characterization and applications of trace elements and their role in humans animals and plants as well as their use in developing novel functional feeds foods and fertilizers.
