

1. For each of the following parts, determine whether there exists an ideal gas process that satisfies the given conditions. If so, describe an experiment (e.g., one involving a cylinder sealed with a movable, frictionless piston) that is consistent with the given conditions. Give an example from tutorial if possible. If not, explain how you know that such a process does not exist.
 - a. There is heat transfer, but the temperature of the gas does not change (i.e., $Q \neq 0, \Delta T = 0$).
 In the scenario via container of gas via piston, if heat is applied but the temperature doesn't change the piston would have to move up to allow more work to be done increasing the volume.
 - b. There is no heat transfer, but the temperature of the gas changes (i.e., $Q = 0, \Delta T \neq 0$).
 A container with a gas & a piston, the piston would move down and compress the gas & increase the temperature.
 - c. There is no heat transfer, but work is done on the gas (i.e., $Q = 0, W \neq 0$).
 The piston compressing the gas is work done on the gas.
 - d. There is heat transfer, but no work is done on the gas (i.e., $Q \neq 0, W = 0$).
 The piston remains locked and an outside source heats the container.

2. One mole of an ideal gas is confined to a container with a movable piston. The questions below refer to the processes shown on the PV diagram at right. Process I is a change from state X to state Y at constant pressure. Process II is a change from state W to state Z at a different constant pressure.

- a. Rank states W-Z according to the temperature, from largest to smallest. If any temperatures are equal, state so explicitly.
 Explain.
 $W(1X^2) = 1, X(1X^2) = 5, Y(5X^2) = 25, Z(5X^2) = 5$

$$Y > X = Z > W$$

- b. For each process, state whether the piston moves inward, moves outward, or does not move.
 Explain.

$W \rightarrow Z$: Piston moves outward (volume increases, pressure stays the same)
 $X \rightarrow Y$: Piston moves outward (volume increases, pressure remains the same)

- c. Based on your answer to part b, state whether the following quantities are positive, negative, or zero. Explain your reasoning by referring to a force and a displacement.

- i. the work done on the gas during process I (W_I)
 For the volume to increase, but pressure remains the same. The process must be heated by something. Work is negative.
- ii. the work done on the gas during process II (W_{II})
 This is the same thing as process 1, but at a different constant pressure, so my answer is the same as above (c-i).

- d. During process I, is the heat transfer to the gas positive, negative, or zero? Explain.
 Negative, this piston would be moving outward.

Hodges,2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching Tutorials in Introductory Physics and Homework Package Lillian C.
