setting up and running an ERP lab      Using Corpus Methods to Triangulate Linguistic Analysis Jesse Egbert, Paul Baker, 2019-09-17 This book builds on Baker and Egbert's previous work on triangulating methodological approaches in corpus linguistics and takes triangulation one step further to highlight its broader applicability when implemented with other linguistic research methods. The volume showcases research methods from other linguistic disciplines and draws on ten empirical studies from a range of topics in psycholinguistics, applied linguistics and discourse analysis to demonstrate how these methods might be most effectively triangulated with corpus linguistic methods. A concluding chapter synthesizes these findings as a means of pointing the way toward future directions for triangulation and its implications for future linguistic research. The combined effect reveals the potential for the triangulation of these methods to not only enhance rigor in empirical linguistic research but also our understanding of linguistic phenomena and variation by studying them from multiple perspectives, making this book essential reading for graduate students and researchers in corpus linguistics, applied linguistics, psycholinguistics and discourse analysis.

**Experimental Research Methods in Sociolinguistics** Katie Drager, 2018-02-22 An accessible, user-friendly guide to the variety of different experimental methods used in sociolinguistics. *Experimental Research Methods in Sociolinguistics* walks students through the how-to of experimental methods used to investigate variation in both speech production and perception. Featuring a companion website with information on experiment-friendly software, sample experiments and suggestions for work to undertake, the book also covers ethical concerns, how to measure production and perception, how to construct and use corpora.

This textbook follows a unique approach by guiding you through a single EEG study, each part introducing the relevant core knowledge and commonly available software. Practical exercises help you master the skills to independently implement every aspect of an experiment, from setting up the lab to analysing the data. Suitable for developing both basic levels of skill for undergraduates as well as advancing towards a stronger command of analysis and understanding at postgraduate level. Michiel Spape is a Lecturer and Researcher in Psychology at the University of Helsinki.
