Basic Set Theory Azriel Levy, 2012-06-11 Although this book deals with basic set theory in general it stops short of areas where model theoretic methods are used on a rather advanced level it does it at an unhurried pace This enables the author to pay close attention to interesting and important aspects of the topic that might otherwise be skipped over Written for upper level undergraduate and graduate students the book is divided into two parts The first covers pure set theory including the basic notions order and well foundedness cardinal numbers the ordinals and the axiom of choice and some of its consequences The second part deals with applications and advanced topics among them a review of point set topology the real spaces Boolean algebras and infinite combinatorics and large cardinals A helpful appendix deals with eliminability and conservation theorems while numerous exercises supply additional information on the subject matter and help students test their grasp of the material 1979 edition 20 figures

**Point Set Theory** Morgan, 2018-04-27 Investigations by Baire Lebesgue Hausdorff Marczewski and others have culminated in various schemes for classifying point sets This important reference text brings together in a single theoretical framework the properties common to these classifications Providing a clear thorough overview and analysis of the field Point Set Theory utilizes the axiomatically determined notion of a category base for extending general topological theorems to a higher level of abstraction axiomatically unifies analogies between Baire category and Lebesgue measure enhances understanding of the material with numerous examples and discussions of abstract concepts and more Imparting a solid foundation for the modern theory of real functions and associated areas this authoritative resource is a vital reference for set theorists logicians analysts and research mathematicians involved in topology measure theory or real analysis It is an ideal text for graduate mathematics students in the above disciplines who have completed undergraduate courses in set theory and real analysis
