**Land Cover Classification of Remotely Sensed Images** S. Jenicka,2021-03-10 The book introduces two domains namely Remote Sensing and Digital Image Processing It discusses remote sensing texture classifiers and procedures for performing the texture based segmentation and land cover classification The first chapter discusses the important terminologies in remote sensing basics of land cover classification types of remotely sensed images and their characteristics The second chapter introduces the texture and a detailed literature survey citing papers related to texture analysis and image processing The third chapter describes basic texture models for gray level images and multivariate texture models for color or remotely sensed images with relevant Matlab source codes The fourth chapter focuses on texture based classification and texture based segmentation The Matlab source codes for performing supervised texture based segmentation using basic texture models and minimum distance classifier are listed The fifth chapter describes supervised and unsupervised classifiers The experimental results obtained using a basic texture model Uniform Local Binary Pattern with the classifiers described earlier are discussed through the relevant Matlab source codes The sixth chapter describes land cover classification procedure using multivariate statistical and spectral texture models and minimum distance classifier with Matlab source codes A few performance metrics are also explained The seventh chapter explains how texture based segmentation and land cover classification are performed using the hidden Markov model with relevant Matlab source codes The eighth chapter gives an overview of spatial data analysis and other existing land cover classification methods The ninth chapter addresses the research issues and challenges associated with land cover classification using textural approaches This book is useful for undergraduates in Computer Science and Civil Engineering and postgraduates who plan to do research or project work in digital image processing The book can serve as a guide to those who narrow down their research to processing remotely sensed images It addresses a wide range of texture models and classifiers The book not only guides but aids the reader in implementing the concepts through the Matlab source codes listed In short the book will be a valuable resource for growing academicians to gain expertise in their area of specialization and students who aim at gaining in depth knowledge through practical implementations The exercises given under texture based segmentation excluding land cover classification exercises can serve as lab exercises for the undergraduate students who learn texture based image processing

**Local Binary Patterns: New Variants and Applications** Sheryl Brahnam,Lakhmi C. Jain,Loris Nanni,Alessandra Lumini,2013-09-01 This book introduces Local Binary Patterns LBP arguably one of the most powerful texture descriptors and LBP variants This volume provides the latest reviews of the literature and a presentation of some of the best LBP variants by researchers at the forefront of textual analysis research and research on LBP descriptors and variants The value of LBP variants is illustrated with reported experiments using many databases representing a diversity of computer vision applications in medicine biometrics and other areas There is also a chapter that provides an excellent theoretical foundation

for texture analysis and LBP in particular A special section focuses on LBP and LBP variants in the area of face recognition including thermal face recognition This book will be of value to anyone already in the field as well as to those interested in learning more about this powerful family of texture descriptors

Randomness and Elements of Decision Theory Applied to Signals Monica Borda,Romulus Terebes,Raul Malutan,Ioana Ilea,Mihaela Cislariu,Andreia Miclea,Stefania Barburiceanu,2021-12-10 This book offers an overview on the main modern important topics in random variables random processes and decision theory for solving real world problems After an introduction to concepts of statistics and signals the book introduces many essential applications to signal processing like denoising texture classification histogram equalization deep learning or feature extraction The book uses MATLAB algorithms to demonstrate the implementation of the theory to real systems This makes the contents of the book relevant to students and professionals who need a quick introduction but practical introduction how to deal with random signals and processes

**Fundamentals of Image Data Mining** Dengsheng Zhang,2019-05-13 This reader friendly textbook presents a comprehensive review of the essentials of image data mining and the latest cutting edge techniques used in the field The coverage spans all aspects of image analysis and understanding offering deep insights into areas of feature extraction machine learning and image retrieval The theoretical coverage is supported by practical mathematical models and algorithms utilizing data from real world examples and experiments Topics and features describes the essential tools for image mining covering Fourier transforms Gabor filters and contemporary wavelet transforms reviews a varied range of state of the art models algorithms and procedures for image mining emphasizes how to deal with real image data for practical image mining highlights how such features as color texture and shape can be mined or extracted from images for image representation presents four powerful approaches for classifying image data namely Bayesian classification Support Vector Machines Neural Networks and Decision Trees discusses techniques for indexing image ranking and image presentation along with image database visualization methods provides self test exercises with instructions or Matlab code as well as review summaries at the end of each chapter This easy to follow work illuminates how concepts from fundamental and advanced mathematics can be applied to solve a broad range of image data mining problems encountered by students and researchers of computer science Students of mathematics and other scientific disciplines will also benefit from the applications and solutions described in the text together with the hands on exercises that enable the reader to gain first hand experience of computing
