Distributed Computing Ajay D. Kshemkalyani, Mukesh Singhal, 2011-03-03 Designing distributed computing systems is a complex process requiring a solid understanding of the design problems and the theoretical and practical aspects of their solutions This comprehensive textbook covers the fundamental principles and models underlying the theory algorithms and systems aspects of distributed computing Broad and detailed coverage of the theory is balanced with practical systems related issues such as mutual exclusion deadlock detection authentication and failure recovery Algorithms are carefully selected lucidly presented and described without complex proofs Simple explanations and illustrations are used to elucidate the algorithms Important emerging topics such as peer to peer networks and network security are also considered With vital algorithms numerous illustrations examples and homework problems this textbook is suitable for advanced undergraduate and graduate students of electrical and computer engineering and computer science Practitioners in data networking and sensor networks will also find this a valuable resource Additional resources are available online at www.cambridge.org/9780521876346

Knowledge and Systems Engineering Van Nam Huynh, Thierry Denoeux, Dang Hung Tran, Anh Cuong Le, Son Bao Pham, 2013-10-01 The field of Knowledge and Systems Engineering KSE has experienced rapid development and inspired many applications in the world of information technology during the last decade The KSE conference aims at providing an open international forum for presentation discussion and exchange of the latest advances and challenges in research of the field These proceedings contain papers presented at the Fifth International Conference on Knowledge and Systems Engineering KSE 2013 which was held in Hanoi Vietnam during 17 19 October 2013 Besides the main track of contributed papers which are compiled into the first volume the conference also featured several special sessions focusing on specific topics of interest as well as included one workshop of which the papers form the second volume of these proceedings The book gathers a total of 68 papers describing recent advances and development on various topics including knowledge discovery and data mining natural language processing expert systems intelligent decision making computational biology computational modeling optimization algorithms and industrial applications

Distributed Constraint Problem Solving and Reasoning in Multi-agent Systems Weixiong Zhang, Volker Sorge, 2004 Distributed and multi agent systems are becoming more and more the focus of attention in artificial intelligence research and have already found their way into many practical applications An important prerequisite for their success is an ability to flexibly adapt their behavior via intelligent cooperation Successful reasoning about and within a multiagent system is therefore paramount to achieve intelligent behavior Distributed Constraint Satisfaction Problems DCSPs and Distributed Constraint Optimization minimization Problems DCOPs are perhaps ubiquitous in distributed systems in dynamic environments Many important problems in distributed environments and systems such as action coordination task scheduling and resource allocation can be formulated and solved as DCSPs and DCOPs Therefore techniques for solving DCSPs and DCOPs as well as strategies for automated reasoning in

distributed systems are indispensable tools in the research areas of distributed and multi agent systems They also provide promising frameworks to deal with the increasingly diverse range of distributed real world problems emerging from the fast evolution of communication technologies The volume is divided in two parts One part contains papers on distributed constraint problems in multi agent systems The other part presents papers on Agents and Automated Reasoning

Applications and Interoperable Systems Anne Remke,Valerio Schiavoni,2020-06-08 This book constitutes the proceedings of the 20th IFIP International Conference on Distributed Applications and Interoperable Systems DAIS 2020 which was supposed to be held in Valletta Malta in June 2020 as part of the 15th International Federated Conference on Distributed Computing Techniques DisCoTec 2020 The conference was held virtually due to the COVID 19 pandemic The 10 full papers presented together with 1 short paper and 1 invited paper were carefully reviewed and selected from 17 submissions The papers addressed challenges in multiple application areas such as privacy and security cloud and systems fault tolerance and reproducibility machine learning for systems and distributed algorithms *Distributed Operating Systems & Algorithms* Randy Chow,Theodore Johnson,1997 Distributed Operating Systems and Algorithms integrates into one text both the theory and implementation aspects of distributed operating systems for the first time This innovative book provides the reader with knowledge of the important algorithms necessary for an in depth understanding of distributed systems at the same time it motivates the study of these algorithms by presenting a systems framework for their practical application The first part of the book is intended for use in an advanced course on operating systems and concentrates on parallel systems distributed systems real time systems and computer networks The second part of the text is written for a course on distributed algorithms with a focus on algorithms for asynchronous distributed systems While each of the two parts is self contained extensive cross referencing allows the reader to emphasize either theory or implementation or to cover both elements of selected topics Features Integrates and balances coverage of the advanced aspects of operating systems with the distributed algorithms used by these systems Includes extensive references to commercial and experimental systems to illustrate the concepts and implementation issues Provides precise algorithm description and explanation of why these algorithms were developed Structures the coverage of algorithms around the creation of a framework for implementing a replicated server a prototype for implementing a fault tolerant and highly available distributed system Contains programming projects on such topics as sockets RPC threads and implementation of distributed algorithms using these tools Includes an extensive annotated bibliography for each chapter pointing the reader to recent developments Solutions to selected exercises templates to programming problems a simulator for algorithms for distributed synchronization and teaching tips for selected topics are available to qualified instructors from Addison Wesley 0201498383B04062001 *Scientific and Technical Aerospace Reports* ,1975 **Designing Reliable Distributed Systems** Peter Csaba Ölveczky,2018-02-12 This classroom

tested textbook provides an accessible introduction to the design formal modeling and analysis of distributed computer systems The book uses Maude a rewriting logic based language and simulation and model checking tool which offers a simple and intuitive modeling formalism that is suitable for modeling distributed systems in an attractive object oriented and functional programming style Topics and features introduces classical algebraic specification and term rewriting theory including reasoning about termination confluence and equational properties covers object oriented modeling of distributed systems using rewriting logic as well as temporal logic to specify requirements that a system should satisfy provides a range of examples and case studies from different domains to help the reader to develop an intuitive understanding of distributed systems and their design challenges examples include classic distributed systems such as transport protocols cryptographic protocols and distributed transactions leader election and mutual execution algorithms contains a wealth of exercises including larger exercises suitable for course projects and supplies executable code and supplementary material at an associated website This self contained textbook is designed to support undergraduate courses on formal methods and distributed systems and will prove invaluable to any student seeking a reader friendly introduction to formal specification logics and inference systems and automated model checking techniques

Distributed Computer Control Systems 1988 Th. d'Epinay Lalive, M.G. Rodd, 2014-06-28 Continuing the forward thinking of previously held distributed computer control systems meetings this volume discusses both the positive and negative views on trends in OSI based communications the development of the fieldbus the importance of the incorporation into basic real time operating systems to be used for distributed systems of concepts such as time stamping and access to global time bases and the influence of artificial intelligence based technologies on the distributed computer control world

Proceedings of the Twenty-Second Annual ACM Symposium on Principles of Distributed Computing, 2003 This paper presents an efficient asynchronous protocol to compute RSA inverses with respect to a public RSA modulus N whose factorization is secret and shared among a group of parties Given two numbers x and e the protocol computes y such that $ye \equiv x \pmod{N}$ A synchronous protocol for this task has been presented by Catalano Gennaro and Halevi Eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a Byzantine agreement sub protocol Our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a Byzantine agreement primitive Hence it leads to efficient asynchronous protocols for threshold signatures and for Byzantine agreement based on the strong RSA assumption without the use of random oracles
