

## Longitudinal Data Analysis: Stata Tutorial

### Part A: Overview of Stata

#### I. Reading Data

- `use`  
Read data that have been saved in Stata format.
- `infile`  
Read raw data and “dictionary” files.
- `import`  
Read spreadsheets saved as “CSV” files from a package such as Excel.

#### II. Do Files

- **What is a do file?**  
A “do” file is a set of commands just as you would type them in one-by-one during a regular Stata session. Any command you use in Stata can be part of a do file. Do files are very useful, particularly when you have many commands to issue repeatedly, or to reproduce results with minor or no changes.

Example: `cd4-readin.do`

```
* Read in cd4 raw data and create stata data set.

cap `which' open-readin . replace
use primary.dta
*File name not yet given, using default name for saving

gen timeyear = round(year*100,25,2)
compress

label var id      "subject ID"
label var time   "years since recruitment"
label var timeyear "days since recruitment"
label var age    "age (years)"
label var age    "age (years) relative to arbitrary origin"
label var pack   "packs of cigarettes smoked per day"
label var strap  "recruitment strap use (yes/no)"
label var event  "number of sexual partners"
label var event  "dependent variable relative to arbitrary origin"

save all , replace

clear
cap `which'
```

You can edit a do file anywhere then save as a file with the extension “.do”. In Windows or Mac, you can type `doedit` in Stata to edit any do files.
