programming to the complete beginner using the native C language. As such it assumes you have no knowledge whatsoever about programming. The main goal of this book is to teach fundamental programming principles using C, one of the most widely used programming languages in the world today. We discuss only those features and statements in C that are necessary to achieve our goal. Once you learn the principles well, they can be applied to any language. If you are worried that you are not good at high school mathematics, don't be. It is a myth that you must be good at mathematics to learn programming. C is considered a modern language even though its roots date back to the 1970s. Originally C was designed for writing systems programs, things like operating systems, editors, compilers, assemblers, and input/output utility programs. But today C is used for writing all kinds of applications programs, as well as word processing programs, spreadsheet programs, database management programs, accounting programs, games, robots, embedded systems, electronics, i.e. Arduino, educational software, the list is endless. Note Appendices A-D are available as part of the free source code download at the Apress website.

What You Will Learn How to get started with programming using the C language. How to use the basics of C. How to program with sequence selection and repetition logic. How to work with characters. How to work with functions. How to use arrays. Who This Book Is For: This book is intended for anyone who is learning programming for the first time.

Beginning Java 9 Fundamentals Kishori Sharan, 2017-11-01. Learn the basics of Java 9 including basic programming concepts and the object-oriented fundamentals necessary at all levels of Java development. Author Kishori Sharan walks you through writing your first Java program step by step. Armed with that practical experience, you'll be ready to learn the core of the Java language. Beginning Java 9 Fundamentals provides over 90 diagrams and 240 complete programs to help you learn the topics faster. The book continues with a series of foundation topics including using data types, working with operators, and writing statements in Java. These basics lead onto the heart of the Java language: object-oriented programming. By learning topics such as classes, objects, interfaces, and inheritance, you'll have a good understanding of Java's object-oriented model. The final collection of topics takes what you've learned and turns you into a real Java programmer. You'll see how to take the power of object-oriented programming and write programs that can handle errors and exceptions, process strings and dates, format data, and work with arrays to manipulate data. This book is a companion to two other books also by Sharan, focusing on APIs and advanced Java topics.

What You'll Learn Write your first Java programs with an emphasis on learning object-oriented programming in Java. Work with data types, operators, statements, classes, and objects. Handle exceptions, assertions, strings, and dates, and object formatting. Use regular expressions. Work with arrays, interfaces, enums, and inheritance. Take advantage of the new JShell REPL tool.
