*Test Automation with Python: 2 Python for Testers* HeadSpin University,2021 This second course in the Test Automation with Python series focuses on writing code to automate software testing As opposed to no code tests where you record your actions in an app for later playback writing code for automation gives you more flexibility in many cases such as when a small change to the app causes the testing process to change This course also explains the choice of Python as the programming language While Java is probably the most popular language used with Selenium and Appium it can lead to unnecessary complexity and confusion unless you know it well Python meanwhile is powerful simple and expressive and in some ways is more flexible in terms of executing UI test automation This course walks you through the entire process from installing Python to writing your first script all the way through completion testing and troubleshooting your code Note This course was created by HeadSpin University We are pleased to host this training in our library

**Test Automation with Python: 1 Introduction to Automated Testing** HeadSpin University,2021 The Test Automation with Python series from Headspin University is designed to teach automation skills and tools for testing

applications in Appium and Selenium the world's most popular UI automation tools. But before getting into the automation itself, this first course delves into the concept of testing from the etymology of the word to how to design useful tests for your software. While using software as it is meant to be run seems like an obvious test, it's also helpful and necessary to imagine conditions for the software that its developers might not have thought about. The history of automation is also covered, highlighting the fact that most software is in fact a form of automation. After this course, you'll have a solid foundation of automated testing and be ready to move on to the next course in the series. Note: This course was created by HeadSpin University.
