Quantitative Methods In Construction Management And Design:

Quantitative Methods in Construction Management and Design John Frank Woodward, 1975-01-01 **Project Planning, Scheduling, and Control in Construction** Calin M. Popescu, Chotchai Charoengnam, 1995-03-20 Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are This encyclopedia brings together in one comprehensive volume all terms definitions and applications related to the time and cost management of construction projects While many of these terms refer to ancient and venerable building practices others have evolved quite recently and refer specifically to modern construction and management techniques Sources include hundreds of professional books trade journals and research publications as well as planning and scheduling software vendor literature The detailed glossary of all applicable terms includes across referenced listing of examples that describe real world applications for each term supplied An extensive bibliography covers all applicable books articles and periodicals available on project planning scheduling and control using CPM and related subjects This book is an important quick reference and desktop information resource for construction planners schedulers and controllers as well as civil engineers and project managers It is also the ultimate research tool for educators students or anyone who seek to improve their understanding of the management of modern construction projects **Mixed Methods Research Design for the Built Environment** Julius Akotia, Bankole Osita Awuzie, Charles Egbu, 2023-12-08 The application of mixed methods research design in the built environment discipline by students and academics has continued to grow exponentially However with no dedicated mixed methods research design textbook in this domain students have struggled to conduct research projects involving a mixed methods research design Mixed Methods Research Design for the Built Environment provides a useful research methodology resource for students academics and researchers across various disciplines in the built environment such as construction management and project management property and real estate management quantity surveying and commercial management building surveying building services engineering civil and geodetic engineering and other built environment disciplines The book can also be useful for students and academics outside the built environment knowledge domain This textbook offers practical and step by step guidance on how to apply mixed methods research design including an elucidation of the various philosophical and methodological underpinnings upon which the choice of a particular variant of the mixed methods research design is predicated It provides practical case examples and guidance on the processes involved to design and undertake mixed methods research the advantages and disadvantages of using mixed methods research and how multiple sources of qualitative and quantitative data can be combined and applied to carry out research projects **Advanced Research Methods in the Built Environment** Andrew Knight, Les Ruddock, 2009-03-16

This book provides a bridge between the introductory research methods books and the discipline specific higher level texts Its unique feature is the coverage of the detailed process of research rather than the findings of research projects Chapter authors have been carefully selected by their expertise discipline and location to give an eclectic range of perspectives Particular care has been taken to balance positivist with interpretivist approaches throughout The authors focus is on the practical consequences of research philosophies strategies and techniques by using their own research and by evaluating the work of others Advanced Research Methods in the Built Environment addresses common topics raised by postgraduate level researchers rather than dealing with all aspects of the research process Issues covered range from the practicalities of producing a journal article to the role of theory in research The material brought together here provides a valuable resource for the training and development of doctoral and young researchers and will contribute to a new sense of shared methodological understanding across built environment research
