Computer Vision - ECCV 2016 Bastian Leibe, Jiri Matas, Nicu Sebe, Max Welling, 2016-09-16 The eight volume set comprising LNCS volumes 9905-9912 constitutes the refereed proceedings of the 14th European Conference on Computer Vision ECCV 2016 held in Amsterdam The Netherlands in October 2016 The 415 revised papers presented were carefully reviewed and selected from 1480 submissions The papers cover all aspects of computer vision and pattern recognition such as 3D computer vision computational photography sensing and display face and gesture low level vision and image processing motion and tracking optimization methods physics based vision photometry and shape from X recognition detection categorization indexing matching segmentation grouping and shape representation statistical methods and learning video events activities and surveillance applications They are organized in topical sections on detection recognition and retrieval scene understanding optimization image and video processing learning action activity and tracking 3D and 9 poster sessions

3D Trajectory Extraction from 2D Videos for Human Activity Analysis Zeyd Boukhers, 2017 The present dissertation addresses the problem of extracting 3D trajectories of objects from 2D videos The reason of this is the theory that these trajectories symbolise high level interpretations of human activities A 3D trajectory of an object means its sequential positions in the real world over time To this end a generic framework for detecting objects and extracting their trajectories is proposed In simpler terms it means obtaining the 3D coordinate of the objects detected on the image plane and then tracking them in the real world to extract their 3D trajectories Lastly this dissertation presents applications of trajectory analysis to understand human activities in crowded environments In this context each phase in the framework represents independent approaches dedicated to solving challenging tasks in computer vision and multimedia

Field and Service Robotics Marco Hutter, Roland Siegwart, 2017-11-01 This book contains the proceedings of the 11th FSR Field and Service Robotics which is the leading single track conference on applications of robotics in challenging environments This conference was held in Zurich Switzerland from 12-15 September 2017 The book contains 45 full length peer reviewed papers organized into a variety of topics Control Computer Vision Inspection Machine Learning Mapping Navigation and Planning and Systems and Tools The goal of the book and the conference is to report and encourage the development and experimental evaluation of field and service robots and to generate a vibrant exchange and discussion in the community Field robots are non factory robots typically mobile that operate in complex and dynamic environments on the ground Earth or other planets under the ground underwater in the air or in space Service robots are those that work closely with humans to help them with their lives The first FSR was held in Canberra Australia in 1997 Since that first meeting FSR has been held roughly every two years cycling through Asia Americas and Europe
