Digital Economy and Computer Applications *Digital Currencies and Energy Consumption* Mr. Itai Agur, Jose Deodoro, Xavier Lavayssière, Soledad Martinez Peria, Mr. Damiano Sandri, Hervé Tourpe, Mr. German Villegas Bauer, 2022-06-07 Whether in crypto assets or in CBDCs design choices can make an important difference to the energy consumption of digital currencies This paper establishes the main components and technological options that determine the energy profile of digital currencies It draws on academic and industry estimates to compare digital currencies to each other and to existing payment systems and derives implications for the design of environmentally friendly CBDCs For distributed ledger technologies the key factors affecting energy consumption are the ability to control participation and the consensus algorithm While crypto assets like Bitcoin are wasteful in terms of resources other designs could be more energy efficient than existing payment systems

Security Protocols XXVI Vashek Matyáš, Petr Švenda, Frank Stajano, Bruce Christianson, Jonathan Anderson, 2018-11-23 This book constitutes the thoroughly refereed post workshop proceedings of the 26th International Workshop on Security Protocols held in Cambridge UK in March 2018 The volume consists of 17 thoroughly revised invited papers presented together with the respective transcripts of discussions The theme of this year's workshop was fail safe and fail deadly concepts in protocol design The topics covered included failures and attacks novel protocols threat models and incentives cryptomoney and the interplay of cryptography and dissent

Regulating the Crypto Economy Iris H-Y Chiu, 2021-10-21 This book focuses on the building of a crypto economy as an alternative economic space and discusses how the crypto economy should be governed The crypto economy is examined in its productive and financialised aspects in order to distil the need for governance in this economic space The author argues that it is imperative for regulatory policy to develop the economic governance of the blockchain based business model in order to facilitate economic mobilisation and wealth creation The regulatory framework should cater for a new and unique enterprise organisational law and the fund raising and financing of blockchain based development projects Such a regulatory framework is crucially enabling in nature and consistent with the tenets of regulatory capitalism Further the book acknowledges the rising importance of private monetary orders in the crypto economy and native payment systems that do not rely on conventional institutions for value transfer A regulatory blueprint is proposed for governing such monetary orders as commons governance The rise of Decentralised Finance and other financial innovations in the crypto economy are also discussed and the book suggests a framework for regulatory consideration in this dynamic landscape in order to meet a balance of public interest objectives and private interests By setting out a reform agenda in relation to economic and financial governance in the crypto economy this forward looking work argues for the extension of regulatory capitalism to this perceived wild west of an alternative economic space It advances the message that an innovative regulatory agenda is needed to account for the economically disruptive and technologically transformative developments brought about by the crypto economy

sociological study of insider outsider tensions that influence the adoption of blockchain technologies and impact the Web3 ecosystem the tensions between the Web3 community the platforms and the users Is the consumer willing to adopt the innovative cryptocurrency Bitcoin as a payment method? Liutauras Rokas,2020-04-28 Master s Thesis from the year 2019 in the subject Computer Sciences Cryptocurrency grade 2 7 course INNOVATION AND TECHNOLOGY MANAGEMENT language English abstract Is the consumer willing to adopt the innovative blockchain based cryptocurrency Bitcoin as a payment method The aim of this work is to assess the European consumer s intention to use Bitcoin for payments Bitcoin is not yet defined in many ways The Role of the consumer is important as consumers play a significant role in technology adoption In this work Bitcoin is investigated from the consumer s perspective as an available innovative payment method A literature reviewed allowed characterizing Bitcoin and to outline factors that have an effect on the consumer s intention to adopt this innovative technology for payments These factors compatibility as in Innovation Diffusion Theory and perceived risk were integrated with a theoretical research model Technology Acceptance Model and its constructs perceived ease of use perceived usefulness and behavioral intention in order to predict the consumer s intention to use Bitcoin for payments The proposed model was empirically tested using data collected from a survey of European consumers The Structural Equation Modeling SEM technique was used to evaluate this research model and a Confirmatory Factor Analysis CFA was performed to test the reliability and validity of the proposed measurement model *Blockchain: A Practical Guide to Developing Business, Law, and Technology Solutions* Joseph J. Algorithms for Payment Channel Networks Sonbol Rahimpour,2022 Major blockchains such as Bitcoin and Ethereum suffer from scalability issues For instance Bitcoin can handle up to about 7 transactions per second whereas custodian payment networks such as Visa can handle tens of thousands of transactions per second One of the promising solutions to scale blockchains such as Bitcoin is Payment Channel Networks PCNs In this thesis we propose new solutions to make the existing PCNs such as the Bitcoin s Lightning network more efficient and secure Chapter 3 studies watchtowers which are entities that watch the blockchain on behalf of their offline clients to protect the clients payment channels In practice there is no trust between clients and watchtowers and it is challenging to incentivize watchtowers to well behave e g to refuse bribery To tackle this problem Chapter 3 proposes a novel reputation system and uses the system to incentivize watchtowers to not only deliver their promised service but also reduce their service fees in competition with each other Chapter 4 proposes Spear a new multi path payment method that can support redundant payments We show that this redundant payments can significantly improve the success rate of payment transfers in the Lightning network The challenge in supporting redundant payments is that the recipient may overdraw funds from the redundant paths In Chapter 4 we explain how this can be done without requiring high computation or major changes to the Lightning network Finally Chapter 5 presents a powerful probing technique called Torrent to discover balances of channels in the Lightning network Unlike the existing techniques Torrent uses multi path payments instead of single path payments This together with a novel max flow algorithm designed for the Lightning Network allows a single probing node to push a large flow of payments through a target channel making it possible to discover balances of even remote channels Another major advantage of Torrent is that it can speed up balance discovery through parallel payment transfers and pre computation of payment paths

Blockchain By Example Bellaj Badr, Richard Horrocks, Xun (Brian) Wu, 2018-11-30 Implement decentralized blockchain applications to build scalable Dapps Key Features Understand the blockchain ecosystem and its terminologies Implement smart contracts wallets and consensus protocols Design and develop decentralized applications using Bitcoin Ethereum and Hyperledger

Book Description The Blockchain is a revolution promising a new world without middlemen Technically it is an immutable and tamper proof distributed ledger of all transactions across a peer to peer network With this book you will get to grips with the blockchain ecosystem to build real world projects This book will walk you through the process of building multiple blockchain projects with different complexity levels and hurdles Each project will teach you just enough about the field s leading technologies Bitcoin Ethereum Quorum and Hyperledger in order to be productive from the outset As you make your way through the chapters you will cover the major challenges that are associated with blockchain ecosystems such as scalability integration and distributed file management In the concluding chapters you ll learn to build blockchain projects for business run your ICO and even create your own cryptocurrency Blockchain by Example also covers a range of projects such as Bitcoin payment systems supply chains on Hyperledger and developing a Tontine Bank Every is using Ethereum By the end of

this book you will not only be able to tackle common issues in the blockchain ecosystem but also design and build reliable and scalable distributed systems What you will learn Grasp decentralized technology fundamentals to master blockchain principles Build blockchain projects on Bitcoin Ethereum and Hyperledger Create your currency and a payment application using Bitcoin Implement decentralized apps and supply chain systems using Hyperledger Write smart contracts run your ICO and build a Tontine decentralized app using Ethereum Implement distributed file management with blockchain Integrate blockchain into existing systems in your organization Who this book is for If you are keen on learning how to build your own blockchain decentralized applications from scratch then this book is for you It explains all the basic concepts required to develop intermediate projects and will teach you to implement the building blocks of a blockchain ecosystem

High-efficiency Cryptocurrency Routing in Payment Channel Networks Vibhaalakshmi Sivaraman, 2019 With the growing usage of Bitcoin and other cryptocurrencies many scalability challenges have emerged A promising scaling solution exemplified by the Lightning Network uses a network of bidirectional payment channels that allows fast transactions between two parties However routing payments on these networks efficiently is non trivial since payments require finding paths with sufficient funds and channels can become unidirectional over time blocking further transactions through them Today s payment channel networks PCNs exacerbate these problems by attempting to deliver all payments atomically This thesis presents the Spider protocol a protocol inspired by congestion control for data networks that addresses these challenges We formalize the PCN routing problem as an optimization problem and motivate Spider using that Spider splits payments into transaction units and uses an explicit multipath transport protocol to control the rates at which the transaction units are sent through the PCN Spider routers signal congestion to end hosts based on observed queuing delay and end hosts accordingly adjust sending rates on their paths This thesis shows through extensive simulations that Spider requires less than 25% of the funds needed by state of the art approaches to successfully route over 95% of the transactions across a wide range of synthetic and real topologies Our improvements are significant across all sizes of transactions Spider completes 40% more of the largest 25% of transactions attempted on the real Lightning Network topology compared to the state of the art

Analysis of Bitcoin as a Peer-to-peer Network for International Payments Sascha Böhme, Massachusetts Institute of Technology. Engineering Systems Division, System Design and Management Program, 2014 The payment system is due for an overhaul The antiquated infrastructure that runs the funds transfer network belongs to the pre Internet era As a result international payments are expensive slow cumbersome and not as secure as they could be This thesis argues that the cryptocurrency Bitcoin is the answer to the problems facing millions of consumers merchants and remitters worldwide The analysis is based on two frameworks The first one is used to measure how well Bitcoin s attributes meet the needs of the users of the payment system The second one is used to decide if the payments industry is likely to have one or more dominant platform leaders

Incentivized Delivery Network of IoT Software Updates Based on Proofs-of-distribution Oded Leiba, 2019

In this paper we introduce IoTPatchPool a novel scheme that enables an incentivized distributed delivery network of IoT software updates We use a decentralized storage network for reducing the load on the vendor when distributing patches towards IoT devices and eliminating central points of failure Unlike existing peer to peer file sharing networks which have a fundamental availability problem for unpopular files our protocol utilizes blockchain based smart contracts to incentivize independent peers termed distributors by means of cryptocurrency payments A vendor of IoT devices deploys a smart contract with a deposit which acts as a publicly verifiable binding bid for delivery of patches to a specific set of IoT endpoints Distributors will compete for delivering the updates to the desired IoT devices and present proofs of distribution in exchange for cryptocurrency payments We address the fair exchange problem between distributors and the consuming IoT devices by utilizing a variation of the Zero Knowledge Contingent Payments ZKCP protocol ensuring that the process is trustless This can encourage the participation of a large number of distributors and thus facilitate a rapid scale out of the system Finally we present and evaluate a prototype implementation combining the BitTorrent network with the blockchain platform Ethereum
