

Building Performance Analysis Using Revit

Powerful new functionality in Revit allows for faster, more accurate Building Performance Analysis

One of the most time-consuming aspects of any Building Performance Analysis (BPA) is the setup required to carry out the analysis. This often is a process of re-creating the building geometry as well as setting the conditions necessary to properly represent the environment both inside and outside of the building. With the 2008 release of the Revit family of products, a great deal of the front end effort necessary to carry out BPA has been removed with the implementation of robust gbXML export as well as a direct link to the IES <Virtual Environment> (<VE>) analysis platform within Revit MEP.

The <Virtual Environment> is a unique software system of integrated Building Performance Analysis tools developed by Integrated Environmental Solutions. The tools available include thermal simulation with a proven capability for natural ventilation, displacement ventilation, chilled beams and ventilated facades studies, Energy analyses for LEED accreditation, daylighting (for LEED) and electric lighting, solar analyses, internal and external CFD airflow studies, occupant evacuation and many more.

In order to take advantage of this advanced workflow between the two platforms, the Revit Building Information Model (BIM) must be properly prepared for analysis. Like any type of analysis, the usefulness and accuracy of the results depend greatly on the quality of the inputs. This involves first an understanding of the conversion of a BIM into a Building Performance Model (BPM), and then an understanding of how that process impacts your Revit BIM. This paper's intent is to assist you in succeeding to leverage your BIM to carry out Building Performance Analysis.

Enhancing Building Performance Shauna Mallory-Hill, Wolfgang F. E. Preiser, Christopher G. Watson, 2011-12-21 Building Performance Evaluation BPE informs and enhances the usability and sustainability of building designs with lessons learned from evaluation of building performance throughout the building life cycle from initial planning through occupancy to adaptive re-use A key feature of BPE is that it examines design and technical performance of buildings alongside human performance criteria That is it seeks to examine facilities in order to determine whether they will work for the people that will use and occupy them Rigorous BPE helps to improve design practice by providing feedback on the effectiveness of the choices made about the building to ensure that its design is optimized for stakeholders uses The overarching theme for Enhancing Building Performance is to present the next generation of BPE work The book provides an updated systematic approach for BPE as well as chapters written by experts from around the world who demonstrate how to apply BPE to enhance building design Topics covered include evidence based and integrative design processes evaluation methods and tools and education and knowledge transfer In addition case studies provide specific examples of how BPE has been used to study such things as the impact of workplace design on human productivity and innovation Written primarily for design professionals and facility managers who wish to use BPE to deliver improved building performance that is responsive to the needs of stakeholders Enhancing Building Performance will also be of great value to researchers and students across a range of architecture and construction disciplines

Building Information Modeling Karen Kensek, Douglas Noble, 2014-06-09 The bright future and exciting possibilities of BIM Many architects and engineers regard BIM as a disruptive force changing the way building professionals design build and ultimately manage a built structure With its emphasis on continuing advances in BIM research teaching and practice Building Information Modeling BIM in Current and Future Practice encourages readers to transform disruption to opportunity and challenges them to reconsider their preconceptions about BIM Thought leaders from universities and professional practice composed essays exploring BIM's potential to improve the products and processes of architectural design including the structure and content of the tools themselves These authors provide insights for assessing the current practice and research directions of BIM and speculate about its future The twenty six chapters are thematically grouped in six sections that present complementary and sometimes

incompatible positions Design Thinking and BIM BIM Analytics Comprehensive BIM Reasoning with BIM Professional BIM BIM Speculations Together these authors provide stimulating ideas regarding new directions in building information modeling Building Performance Analysis Pieter Jacobus Cornelis Jan de De Wilde,2022 *Assessing Building Performance* Wolfgang Preiser, Jacqueline Vischer,2006-08-11 The building performance evaluation BPE framework emphasizes an evaluative stance throughout the six phases of the building delivery and life cycle 1 strategic planning needs analysis 2 program review 3 design review 4 post construction evaluation review 5 post occupancy evaluation and 6 facilities management review adaptive reuse The lessons learned from positive and negative building performance are fed into future building delivery cycles The case studies illustrate how this basic methodology has been adapted to a range of cultural contexts and indicates the positive results of building performance assessment in a wide range of situations Guidelines for Using Building Information Modeling (BIM) for Environmental Analysis of Buildings Thomas J. Reeves,2012 Building Information Modeling BIM efficiently integrates environmental analysis into the design and delivery of high performance buildings Building Energy Modeling BEM a subset of BIM employs various simulation tools for predicting the environmental performance of buildings As the demand for high performance buildings has increased BEM has facilitated the delivery of buildings that meet expected performance requirements The research objectives were to 1 evaluate various BEM tools and 2 develop guidelines for using BEM tools in design and delivery of high performance buildings Twelve BEM tools were evaluated using four criteria interoperability user friendliness available inputs and available outputs The top three programs were selected based on this evaluation and used in the case study to simulate energy consumption daylighting and natural ventilation for two buildings one LEED certified and one non LEED certified The results of the case study were used to compare the environmental performance of the two buildings and to develop guidelines for using BEM tools to analyze building environmental performance Building Performance Simulation for Design and Operation Jan L.M. Hensen,Roberto Lamberts,2019-04-24 When used appropriately building performance simulation has the potential to reduce the environmental impact of the built environment to improve indoor quality and productivity as well as to facilitate future innovation and technological progress in construction Since publication of the first edition of Building Performance Simulation for Design and Operation the discussion has shifted from a focus on software features to a new agenda which centres on the effectiveness of building performance simulation in building life cycle processes This new edition provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition and from a single building to district level It contains new chapters on building information modelling occupant behaviour modelling urban physics modelling urban building energy modelling and renewable energy systems modelling This new edition keeps the same chapter structure throughout including learning objectives chapter summaries and assignments Moreover the book Provides unique insights into the techniques of building performance modelling and simulation and their
