Fundamentals of Modern Bioprocessing Sarfaraz K. Niazi, Justin L. Brown, 2017-07-27 Biological drug and vaccine manufacturing has quickly become one of the highest value fields of bioprocess engineering and many bioprocess engineers are now finding job opportunities that have traditionally gone to chemical engineers. Fundamentals of Modern Bioprocessing addresses this growing demand. Written by experts well established in the field, this book connects the principles and applications of bioprocessing engineering to healthcare product manufacturing and expands on areas of opportunity for qualified bioprocess engineers and students. The book is divided into two sections: the first half centers on the engineering fundamentals of bioprocessing, while the second half serves as a handbook offering advice and practical applications. Focused on the fundamental principles at the core of this discipline, this work outlines every facet of design, component selection, and regulatory concerns. It discusses the purpose of bioprocessing to produce products suitable for human use, describes the manufacturing technologies related to bioprocessing, and explores the rapid expansion of bioprocess engineering applications relevant to health care product manufacturing. It also considers the future of bioprocessing, the use of disposable components, which is the fastest growing area in the field of bioprocessing to replace traditional stainless steel. In addition, this text discusses the many types of genetically modified organisms, outlines laboratory techniques, includes the most recent developments, serves as a reference, and contains an extensive bibliography. Emphasizes biological manufacturing using recombinant processing, which begins with creating a genetically modified organism using recombinant techniques. Fundamentals of Modern Bioprocessing outlines both the principles and applications of bioprocessing engineering related to healthcare product manufacturing. It lays out the basic concepts, definitions, methods, and applications of bioprocessing. A single volume, comprehensive reference developed to meet the needs of students with a bioprocessing background, it can also be used as a source for professionals in the field.

Modelling of Chemical Process Systems Syed Ahmad Imtiaz, 2023-07-25. Models and simulations are widely being used for design optimization, fault detection and diagnosis, and various other decision making purposes. Increasingly, models are developed at different scales and levels all the way from molecular level to the large scale process systems scale. *Modelling of Chemical Process Systems* gives readers a feel for the multiscale modelling. As models have been developed for various applications, a general systematic method for building model has emerged. This book starts with the history of modelling and its usefulness, describing modelling steps in detail. Examples have been chosen carefully from both conventional chemical process systems to contemporary systems including fuel cell and bioprocesses. Modelling theories are complemented with case studies that explain step by step modelling methodologies. This book also introduces the application of machine learning techniques to model chemical process systems. This makes the book an indispensable reference for academics and professionals working in modelling and simulation. Includes case studies that explain step by step modelling methodologies. Covers detailed multiscale modelling of chemical processes providing examples from traditional and novel areas. Provides modelling insight at micro and macro scale levels including machine learning techniques.
