Biotechnology in blood transfusion C.Th. Smit Sibinga,P.C. Das,L.R. Overby,2012-12-06 This symposium is devoted to Biotechnology in Blood Transfusion there are 22 experts discussing the state of the art in the application of monoclonal antibodies recombinant DNA technologies and heterologous expression systems to the improvement and sometimes replacement of blood products characterization of blood constituents and the effect of these developments on blood transfusion procedures Ten and maybe five years ago the title of a symposium such as this would have been Biosciences in blood transfusion informing what basic developments in molecular biology biochemistry and human physiology might pertain to blood transfusion in the distant future That future is getting closer and not only one is interested in basic developments in immunology recognition and identification of viral and bacterial components and products tissue and blood bloodgroup blood group typing typing but also in the potential application of these developments and their economic perspectives That is what biotechnology is all about basic science tells us where and how we might look for new technologies and the development of such technologies is only possible if there is a perspective for improvement in quality safety acceptance or performance to cost ratio

**Biotechnology of Blood** Jack Goldstein,2014-06-28 Biotechnology of Blood presents research on applications of biotechnology to blood and its components The book is organized into four parts Part I begins with an overview of the blood business in order to provide background of the industry to identify problems and perhaps some solutions that rely on the scientific advances made possible by biotechnology This is followed by studies on the storage and preservation of red blood cells autologous blood salvage procedures the development procedures to provide a constant supply of blood group O and the development of blood substitutes Part II on plasma fractions includes studies on the preparation of plasma fractions recombinant antihemophilic factors and fibrinogen Part III on the regulation of blood cell products includes studies such as hematopoietic stem cell processing and storage and long term bone marrow cell cultures Part IV on blood borne diseases examines the inactivation of viruses found with plasma proteins and viruses found with cellular components

**White cells and platelets in blood transfusion** C.Th. Smit Sibinga,P.C. Das,C.P. Engelfriet,2012-12-06 As a clinical discipline blood transfusion encompasses enormous vista varying from biotechnology to molecular biology from plasma products cell biology and growth factors to interleukines Growth of knowledge in this field has been rapid and expertise is now required to be mastered and renewed in translating these ideas for patient care Various types of cells could be harvested progenitor stem cells derived from bone marrow or from circulating blood as a source for transplants in the hemostatic armoury platelets could be used prophylactically granulocytes and mononuclear cells are available for treatment of infections or immune modulations However their therapeutic use carries potential complications including graft versus host disease and CMV infection Prevention of such complications by irradiation and by removal of immunocompetent leukocytes are important issues Thus production of such therapeutic materials ought to address the issues

at the earliest to eliminate those problems while adhering to the concept of high quality the impact of storing platelets for longer periods by using improved plastic containers or storing almost indefinitely in frozen state should be explored Rapid progress in cell culture techniques and biotechnology have enriched the transfusion medicine armoury with lymphokines interferons and cell colony growth factors which have great potentials for enhancement of basic knowledge as well as considerable therapeutic applications in patients
