The Contribution of Porter and Kramer's Concept of Creating Shared Value to CSR Theory Natalie Junge,2011-12-09 Master s Thesis from the year 2011 in the subject Business economics Business Management

Corporate Governance grade 1 0 Liverpool John Moores University language English abstract Following the HBR article Creating Shared Value by Michael Porter and Mark Kramer published in January 2011 the author witnessed an online debate on the subject suggesting that CSV was hardly any more than a strategic move to support FSG the consultancy run by Michael Porter and Mark Kramer It was suggested that Porter and Kramer offered nothing new but gave CSR a new name But there were also voices claiming that it would be great if CSV was reality So there seemed to be something about CSV that some people got and others denied What was it In this dissertation the ideas laid down in CSV are evaluated and appraised against related concepts of corporate social responsibility Special focus lies on the aspects Porter and Kramer used to separate CSV from CSR justification value and concepts for practical application The main part of the study consists of a literature review on related topics It is laid down that basic ideas of CSV have already been introduced in CSR e g with corporate citizenship sustainability doing business at the bottom of the pyramid or community relations Philosophical considerations on corporate responsibility and political correlations give reason to regard CSV a competitive tool rather than an alternative approach to CSR The concept is critically appraised from a societal perspective showing that CSV can be applied to benefit all but does not lead to shared value in itself In the second part of the dissertation an explorative study is conducted among energy suppliers and suppliers of outdoor equipment operating in the German market to find out whether Porter and Kramer s distinction between responsive and strategic CSR can be supported and whether CSV might deliver new options for the companies The study shows that companies are to a far degree concerned with responsive CSR and gives reason to embrace the idea that it depends on the corporation s product and business model whether the trend on CSR can be used strategically or has to be applied in a responsive manner The author introduces a management model putting into relation the concepts of CSR and CSV Plainly spoken CSR is considered the justification and underlying assumption while CSV is a management approach that can be applied to address corporate social responsibility Social Innovation and New Business Models Laura Michelini, 2012-08-08 Extreme poverty continues to afflict the world and it requires urgent action Social innovation can be the driving force to spark change and to find common ground for shared value creation particularly when it is directed at low income markets Leading companies have recently developed innovative forms of social innovation by combining three elements the concept of shared value creation the theory of the fortune at the bottom of the pyramid and a corporate social entrepreneurship approach which they use to enter low income markets by helping to solve global challenges while simultaneously generating profits The book identifies the main forms of social innovation social business models social products and social communication strategies Further it shows how companies can successfully implement social innovation and presents new forms of social business models that can be used to target low income markets Finally the book presents key success factors related to the social product innovation process and corresponding communication *The Behaviour of Selected Small and Medium Enterprises in the Area of Corporate Social Responsibility* Peter

Achenbach,2022-06-24 Doctoral Thesis Dissertation from the year 2021 in the subject Business economics Business Management Corporate Governance grade 1 0 very good University of Bratislava University of Economics Bratislava language English abstract The global objective of the dissertation is to answer the question What is the status quo regarding strategically implemented CSR in general and at SME s within the German construction sector in particular and how should a model be designed that enables the practicability of CSR at these SME s For this purpose the research areas are divided into a theoretical and a practical section In the theoretical part the worldwide status quo on CSR is determined by means of a literature research Concrete results of this research arise in the definition of key figures which can be selected on the basis of the SDG s by means of a benchmarking with Best in Class Companies for SMEs The practical part of the dissertation addresses expert interviews in the context of qualitative analyses the evaluation results of which are contributing to the derivation of measures for the strategic anchoring of CSR A quantitative analysis is used to determine the status quo of CSR directly among a number of representative micro entrepreneurs The result of the work conducted is an easy to implement model furthermore a typology and categorization of the German CEOs of the SMEs studied is derived which enables a type specific implementation of this CSR model By deducting the most important indicators for recording and managerial accounting non financial parameters of the German construction industry and developing a standard reporting system according to the DNK a set of methods could be designed that can be used by micro enterprises and which has proven its suitability in a practical test In a cost benefit calculation the ROI of these investments made for the introduction and maintenance of CSR could be determined and thus confirming that a rapid amortisation of these expenses can also be expected from a financial point of view

web answer e this is another boundary behavior question with a mathematical slant to it the frequency of the incident and transmitted waves are always the same thus use $f = v / \lambda$ to find the frequency of the incident wave 2.2 hz the frequency of the transmitted wave is also 2.2 hz the wavelength is 3.0 m and so the speed is $f \lambda = 6.6 \text{ m/s}$
