C++ Concurrency in Action Anthony Williams, 2012. With the new C Standard and Technical Report 2, TR2, multi-threading is coming to C in a big way. TR2 will provide higher-level synchronization facilities that allow for a much greater level of abstraction and make programming multi-threaded applications simpler and safer. Concurrent programming is required if programmers are to take advantage of the multi-core microprocessors increasingly available from Intel and others. The new standard for C has extensions to the language that make concurrent programming more accessible to regular developers. As a guide and reference to the new concurrency features in the upcoming C Standard and TR2, this book is invaluable for existing programmers familiar with writing multi-threaded code in C using platform-specific APIs or in other languages, as well as C programmers who have never written multithreaded code before.

Low Power Hardware Synthesis from Concurrent Action-Oriented Specifications Gaurav Singh, Sandeep Kumar Shukla, 2010-07-23

Human lives are getting increasingly entangled with technology especially comp ing and electronics At each step we take especially in a developing world we are dependent on various gadgets such as cell phones handheld PDAs netbooks me cal prosthetic devices and medical measurement devices e g blood pressure m itors glucometers Two important design

constraints for such consumer electronics are their form factor and battery life This translates to the requirements of reduction in the die area and reduced power consumption for the semiconductor chips that go inside these gadgets Performance is also important as increasingly sophisticated applications run on these devices and many of them require fast response time The form factor of such electronics goods depends not only on the overall area of the chips inside them but also on the packaging which depends on thermal characteristics Thermal characteristics in turn depend on peak power signature of the chips As a result while the overall energy usage reduction increases battery life peak power reduction influences the form factor One more important aspect of these electronic equipments is that every 6 months or so a newer feature needs to be added to keep ahead of the market competition and hence new designs have to be completed with these new features better form factor battery life and performance every few months This extreme pressure on the time to market is another force that drives the innovations in design automation of semiconductor chips
