Introduction

The chemical reaction is a process in which the substances react to form new substances. In this experiment, we will observe the reaction between sodium metal and water.

The reaction between sodium metal and water is a highly exothermic reaction. Sodium metal reacts with water to form sodium hydroxide and hydrogen gas. The reaction is represented by the following chemical equation: $2Na + 2H_2O \rightarrow 2NaOH + H_2$. The reaction is highly exothermic, and the heat released is sufficient to ignite the hydrogen gas. The reaction is also highly corrosive, and the sodium hydroxide solution formed is a strong base. The reaction is used in the production of sodium hydroxide, which is a common industrial chemical. The reaction is also used in the production of hydrogen gas, which is used in the production of ammonia and other chemicals.
