Introduction of blockchain into the commodity trading process Christoph Ulbig, 2018-11-12 Within the last years blockchain has become more in focus of the commodity trading sector because of its reputed potential The characteristics of blockchain can be used to make it to an infrastructure technology The trend toward the use of blockchain therefore furthers the optimization of the entire value chain and reduction of the friction costs within

the trading process To reduce friction costs and to make use of the characteristics of blockchain the technology is being introduced as a radical innovation into the commodity trading value chain The focus of this thesis is on the resulting effects on the value chain after implementation The research is conducted in a qualitative way with an inductive research approach Data is collected in order to build the theory and interviews are conducted using the Gioia methodology for data analysis The findings indicate that the value chain as a source of competitive advantage is affected in an overall positive way for firms Competitive advantage is supported by value adding effects and cost reduction which are both enhanced through the use of blockchain In addition the results indicate that the competitive advantage of a company is also supported through power The power that results from independence and control of data and information is enhanced by blockchain It is therefore possible to conclude that the value chain of a company is positively affected by the radical innovation of blockchain This leads to a greater competitive advantage for the company and positive performance in a competitive environment

Innovation Landscape brief: Blockchain International Renewable Energy Agency IRENA,2019-09-01 IRENA s Innovation Landscape report highlights innovations in enabling technologies

Blockchain-Technology in the Energy Industry Bartek Mika,2020-02-13 The expansion of renewable energy is rapidly increasing as part of the energy revolution The structure of energy supply systems is becoming increasingly decentralized decentralization New players such as prosumers who generate and consume their own electricity could establish themselves in the electricity market However due to their low capacity prosumers are currently unable to participate economically in electricity trading In particular the increasing complexity of control and the load on the network infrastructure as well as the high requirements on data security which are associated with the exchange of electricity and the associated electricity bills require digitalization of the energy revolution

Energiewende 2 0 The aim of this book is to examine if the blockchain as a driver of the energy revolution for the development of new digital business models can contribute to the successful transformation of the energy system Numerous statements from energy industry experts study results and two surveys indicate that blockchain has high potential in the medium and long term to significantly impact the energy industry in the coming years Blockchain technology promises economic value through its strengths such as disintermediation security transparency and automation However in addition to technical challenges such as the upcoming smart meter rollout the smart meter gateway required for communication and the compatibility between the smart metering systems and the blockchain there are also legal and regulatory hurdles which make the use of the blockchain difficult in the short term By far the most widely discussed usage of blockchain in the energy sector is the peer to peer trading of decentralized electricity from renewable energies Therefore it was examined within the framework of a concept whether there is a possibility for prosumers to participate economically in electricity trading despite their low capacity The results show that due to regulatory constraints such an implementation is only possible in form of a service model in which all areas of responsibility are transferred to a service provider eg electricity supplier An

independently developed business model which includes peer to peer trading based on a service shows the required infrastructure a detailed process description in the context of a business process map and one option to configure the blockchain
