

Entry of Salts:

Salts enter in the bodies of such plants due to their higher concentration in sea water.

Removal of Water:

Water tends to move out of their cells into the hypertonic sea water.

Mechanism:

When salts enter into cells, plants carry out active transport to move and hold large amount of salt in vacuoles. Salts are not allowed to move out through the semi-permeable membranes of vacuoles. So the sap of vacuoles remains even more hypertonic than sea water. In this way, water does not move out of cells.

Example:

- Many sea grasses
