book consists of two parts Part I Fundamentals of BPM describe the state of the art of the major BPM theoretical concepts Part II Implementation for BPM is dedicated to presenting the concepts of implementation developed largely by the author This second part considers the technological support in each of the BPM layers The author shows how to implement the core principles of the discipline which differs itself from traditional management This book is for all professionals whether they perform in the public private or non profits sectors who require or want to learn more about this process management discipline It is also for students and academics of the industrial and computer sciences and to all the business and administration Schools

Modern Business Process Automation Arthur H. M. ter Hofstede, Wil M. P. van der Aalst, Michael Adams, Nick Russell, 2009-11-18 The field of Business Process Management BPM is marred by a seemingly endless sequence of proposed industry standards Contrary to other fields e.g. civil or electronic engineering these standards are not the result of a widely supported consolidation of well understood and well established concepts and practices In the BPM domain it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field Despite the initial fervor associated with such standardization activities it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings Moreover the results of the standardization processes themselves are a concern BPM standards tend to deal with complex concepts yet they are never properly defined and all too often not informed by established research The result is a plethora of languages and tools with no consensus on concepts and their implementation They also fail to provide clear direction in the way in which BPM standards should evolve One can also observe a dichotomy between the business side of BPM and its technical side While it is clear that the application of BPM will fail if not placed in a proper business context it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust

Automation Arthur H. M. ter Hofstede, Wil van der Aalst, Michael Adams, Nick Russell, 2009-11-30 The field of Business Process Management (BPM) is marred by a seemingly endless sequence of proposed industry standards. Contrary to other fields e.g. civil or electronic engineering these standards are not the result of a widely supported consolidation of well understood and well established concepts and practices. In the BPM domain it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field. Despite the initial fervor associated with such standardization activities it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings. Moreover the results of the standardization processes themselves are a concern. BPM standards tend to deal with complex concepts yet they are never properly defined and all too often not informed by established research. The result is a plethora of languages and tools with no consensus on concepts and their implementation. They also fail to provide clear direction in the way in which BPM standards should evolve. One can also observe a dichotomy between the business side of BPM and its technical side. While it is clear that the application of BPM will fail if not placed in a proper business context it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust.

Business Process Change Paul Harmon, Business Process Business Process Trends, 2010-07-28 Every company wants to improve the way it does business to produce goods and services more efficiently and to increase profits. Nonprofit organizations are also concerned with efficiency, productivity and with achieving the goals they set for themselves. Every manager understands that achieving these goals is part of his or her job.
