Paradigms of
Artificial Intelligence Programming:
Case Studies in Common Lisp

Peter Norvig (University of California at Berkeley)

"This book will become one of the classics. It goes further than any other text currently available for teaching advanced Lisp coding techniques and giving the reader a perspective on AI programming. This is definitely the best text I have seen...I think this book will be a classic for Common Lisp as Abelson and Sussman's is for Scheme."
> **David C. Loeffler (MCC)**

"...I think [this book's] appeal should be tremendous because the student studies and builds real, working programs. [It] contains far and away the best example [programs] I have seen to date."
> **Prof. Bruce D'Ambrosio (Oregon State University)**

"[This is] a book that I can recommend to experienced software developers that they will use and enjoy....The honesty and matter-of-fact style will appeal to those who have 'seen it all' in software development..."
> **Mary Boelk (Johnson Controls)**

Paradigms of AI Programming is the first text to teach advanced Common Lisp techniques in the context of building major AI systems.

By reconstructing authentic, complex AI programs using state-of-the-art Common Lisp, the book teaches students and professionals how to build and debug robust practical programs, while demonstrating superior programming style and important AI concepts.

The author strongly emphasizes the practical, performance issues of writing real working programs of significant size, including chapters on troubleshooting and efficiency. Also included is a discussion of the fundamentals of object-oriented programming and a description of the main CLOS functions.

This volume is an excellent text for a course on AI programming, a useful supplement for general AI courses and an indispensable reference for the professional programmer.
