Pattern Classification Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition, readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning, and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises, and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

Mathematical Morphology and Its Applications to Image and Signal Processing Petros Maragos, Ronald W. Schafer, Muhammad Akmal Butt, 2012-12-06 Mathematical morphology (MM) is a powerful methodology for the quantitative analysis of geometrical structures. It consists of a broad and coherent collection of theoretical concepts, nonlinear signal operators, and algorithms aiming at extracting from images or other geometrical objects information related to their shape and size. Its mathematical origins stem from set theory, lattice algebra, and integral and stochastic geometry. MM was initiated in the late 1960s by G. Matheron and J. Serra at the Fontainebleau School of Mines in France. Originally, it was applied to analyzing images from geological or biological specimens. However, its rich theoretical framework, algorithmic efficiency, easy implementability on special hardware, and suitability for many shape-oriented problems have propelled its widespread diffusion and adoption by many academic and industry groups in many countries as one among the dominant image analysis methodologies. The purpose of *Mathematical Morphology and Its Applications to Image and Signal Processing* is to provide the image analysis community with a sampling from the current developments in the theoretical, deterministic, and stochastic and computational aspects of MM and its applications to image and signal processing. The book consists of the papers presented at the ISMM 96, grouped into the following themes: Theory, Connectivity, Filtering, Nonlinear System Related to Morphology, Algorithms, Architectures, Granulometries, Texture, Segmentation, Image Sequence Analysis, Learning, Document Analysis, Applications.
