paper aims to introduce the reader to some simple applications of resampling methods as applied to ecotoxicological data  
Examples of applications in trend detection comparison of two populations and estimation of population parameters are given  
These are compared to results obtained from more familiar methods Finally the potential of resampling methods is discussed  
*A New Resampling Method to Improve Quality of Research with Small Samples* Haiyan Bai, 2007 Through an evaluative  
simulation study this dissertation provides numerical evidence for the reliability and validity of the amplified S SMART  
samples The amplified S SMART samples were similar to its original small samples in terms of the statistical behaviors and  
distributions Thus it produces unbiased resamples from the original small sample while correcting influence of extreme  
values Therefore the new resampling method has the potential to help researchers improve the quality of research with small  
samples through increasing statistical power resisting outlier influences and making advanced statistical techniques  
applicable to research with small samples
